CONNECT

Unifying your unique industrial ecosystem with full visibility into all your information and analytics from one single view.

Imagine a connected hybrid cloud experience purpose-built for your industry. You can access industrial information in context, make decisions based on real-time intelligence, and visualize data, all in one place. You can share relevant information across teams, tap into a network of consumers, producers, partners, and vendors, and build or extend your ecosystem to bolster your investments.

That's the CONNECT Effect.

EXPERIENCE THE CONNECT EFFECT

Accelerating digital transformation

CONNECT unifies your industrial ecosystem in a single, secure platform—helping you do more with your industrial data than ever before. It allows you to use your data to drive digital transformation in real time with powerful intelligence and robust insights.

Access SaaS capabilities through the platform to create an industrial hybrid architecture that offers the robustness of on-premises industrial applications with the scale and accessibility of cloud. Engineer smarter and operate better with an open and neutral industrial cloud platform. Promote sustainable growth by achieving transformation faster, reducing costs, and optimizing at scale. Connect your business to your ecosystem of partners and accelerate your time to value using proven industrial expertise.

Trusted intelligence

Access rich data and information in context from a proven industrial platform.

Unified experience

Get a centralized view of your enterprise from a single source to align teams and stay competitive.

Actionable insight

Make the most informed decisions fast with real-time intelligence and full visibility—anytime, anywhere.

Empowered ecosystem

Collaborate with consumers, partners, vendors, and more to extend your reach across the value chain.

CONNECT, an industrial intelligence platform

Open and neutral, providing rich data insights for your unified industrial ecosystem

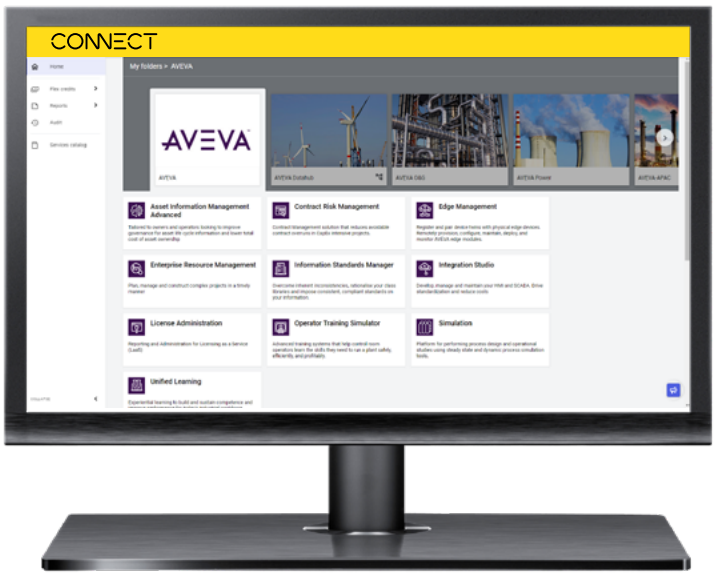
Data

Intelligent twin

Experience

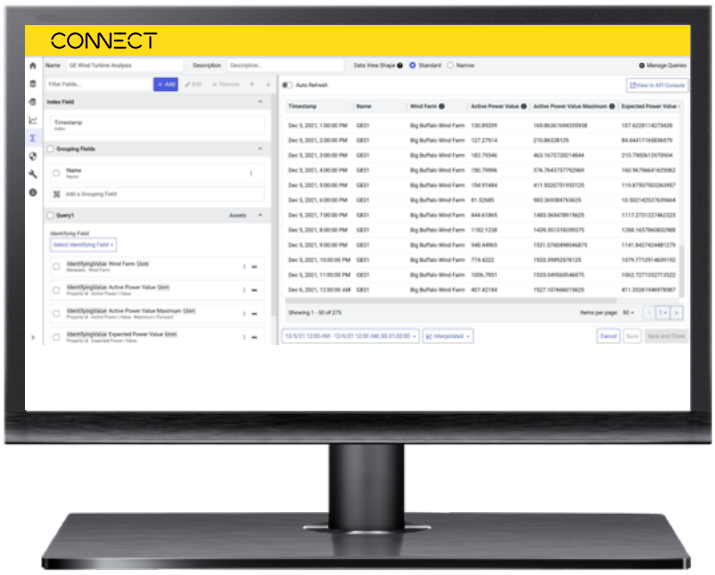
Empowered ecosystem



Service and usage management

Manage user permissions and monitor budgets, service usage, and credit consumption, easily scaling to your business needs.

- Access the full portfolio of AVEVA software
- Accelerate time to value with flexible, scalable, and trusted industrial hybrid SaaS solutions
- Optimize your industrial software investments centrally



Data services

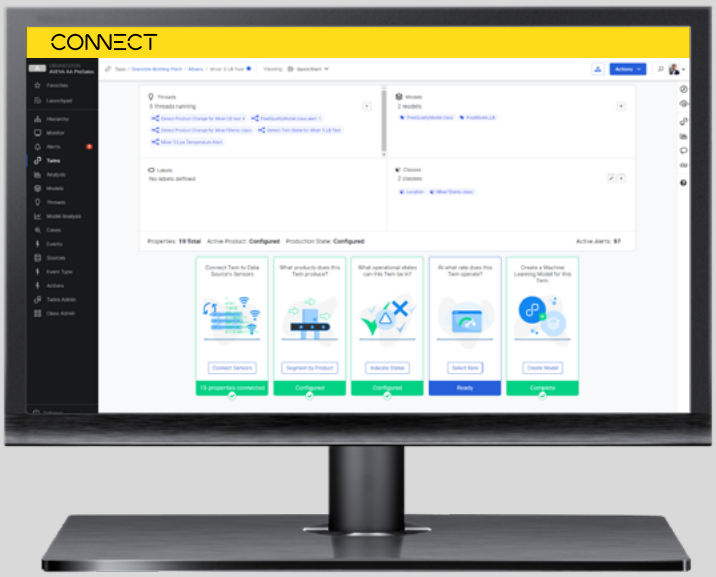
Aggregate, contextualize and share data securely across your organization and ecosystem of services, partners, suppliers, and more, from site to cloud.

- Build and manage a central data repository for BI, AI and ML tools
- Securely share your industrial information with authorized users, extending the use of your existing data beyond your four walls
- Enable third-party providers to access real-time industrial data for customized services and applications

Visualization services

Build your own dashboards using custom and pre-defined content for visualizing data from CONNECT and other sources.

- Visually relate disparate data sources and systems in context to each other
- Gather insights between applications and across data types quickly, using an Industrial AI Assistant
- Share actionable information with operations, reliability, business, and other teams anywhere, through a browser



Modeling and analytics services

Maximize the value of your operations data by generating real-time predictive and prescriptive insights using AI and ML.

- Use AI and ML to improve process efficiency
- Understand production outcomes and get recommended corrective actions
- Collaborate with trusted partners to enable cross-company collaboration and discover new opportunities

Application development services

Empower partners and developers to build solutions that extend and enhance your customers' use cases.

- Gain access to development tool sets, exclusive events, and industrial solution expertise
- Enable design and provisioning of value-added solutions through an out-of-the-box data-sharing infrastructure

Development environment and tools

Technical support and consulting services

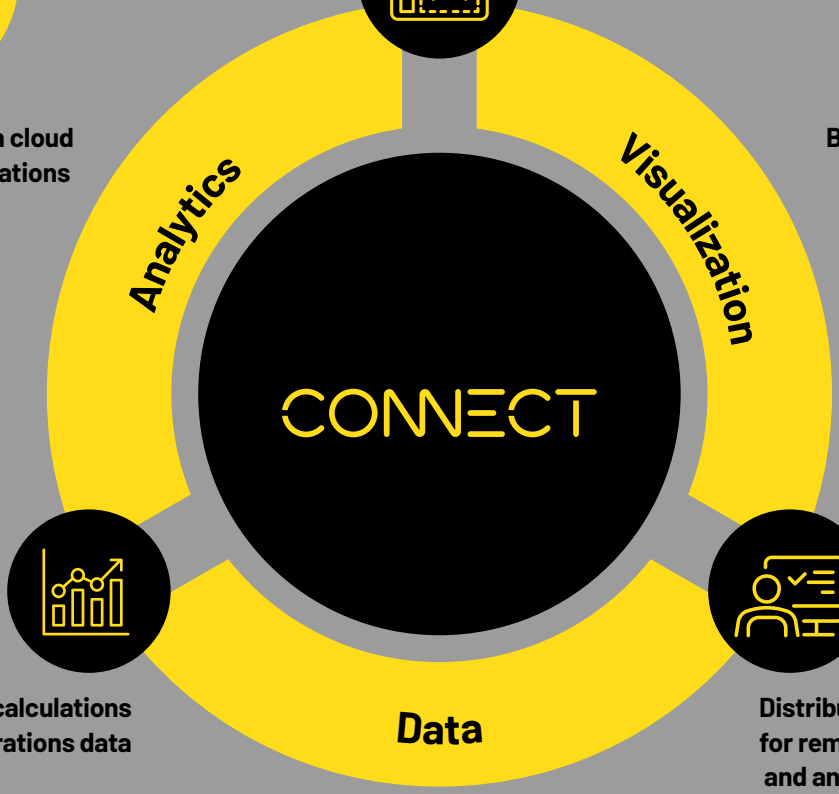
Technical enablement materials

Improve data-driven decisions to increase operational efficiency, productivity, safety, sustainability, and asset reliability.

Provide calculated insights to enrich visualization

Single interface for both cloud and on-premises applications

Build solutions that extend and enhance use cases



Feed analytic calculations with operations data

Distribute operations data for remote visualization and analysis
