

# End-to-end IPS Business Process - "BIKE Example"

**Presentation of all S-Series IPS Specifications including S1000D and ASD-STE100  
in one end-to-end practical example**

**Name of Presenter:** **THE BIKE TEAM**

**Rank/title of presenter:** Experts from the different S-Series Steering Committees

**Company/Organization:** **ASD-Europe / AIA-USA**

Abstract-No: -

## Full list of contributors/presenters

Full Name of Presenter	Company	Function in Company	Role in IPS Series SC's / Community
Mr. Achim <b>BESEL</b>	AIRBUS Defence & Space (ADS)	Expert IETD, Standardisation, Processes and Technology	Secretary S1000D Council
Mr. Daan <b>DE LANGE</b>	Sopra Steria	Expert on Systems Engineering and ILS/LSA	Vice Chairman S4000P SC
Mr. Peter <b>EICHMÜLLER</b>	AIRBUS Defence & Space (ADS)	Expert Logistic Support Analysis (LSA)	Co-Chair S3000L SC
Mr. Leif <b>GYLLSTRÖM</b>	Former SAAB	-	Emeritus S3000L SC
Mr. Peter <b>HELLEKANT</b>	SAAB	Customer Support Manager, Support specialist	Secretary S6000T SC
Mr. Carlos <b>LAFUENTE</b>	AIRBUS Defence & Space (ADS)	Expert Technical Information and Data (TID)	Chair S2000M SC
Mr. Jose Manuel <b>LEIVA MOLINA</b>	AIRBUS Defence & Space (ADS)	LSA specialist	Secretary S3000L SC
Mr. Joakim <b>LUNDQVIST</b>	SAAB	Technical Information Manager and SME S1000D	Vice Chair S1000D SC
Mrs. Dawn <b>MEYER</b>	BOEING	Program Manager, Integrated Product Support, T-7A Aircraft Training System	Co-Chair SX000i SC
Mr. Parker <b>OWEN</b>	Integrated Support Systems (ISS) Inc.	Director of Technical Operations	Domain Expert DMEWG
Mr. Uwe <b>SCHÄFER</b>	ESG	S1000D specialist	Member Bike Working Group (BWG)
Mr. Ramon <b>SOMOZA</b>	AIRBUS Defence & Space (ADS)	Senior Expert In-Service Data Feedback, Integration and Management	Chairman S5000F SC Co-Chair SX000i SC
Mr. Phil <b>WILLIAMS</b>	Team Defence	Team Defence Information Managing Director	Chairman ASD/AIA IPS Council

# The S-Series IPS Specifications and their relevance to In-Service Product and Customer Support

End-to-end IPS Business Process - "BIKE Example"

Yeti SB5 Beti Assembly214

## *Presented by*

- Dawn Meyer **SX000i**
- Daan de Lange **S4000P**
- Peter Eichmüller **S3000L**
- Carlos Lafuente **S2000M**
- Achim Besel **S1000D**
- Peter Hellekant **S6000T**
- Ramon Somoza **S5000F**
- Phil Williams **Moderator**

# Structure of the presentation

## Initial development of support solution:

### Baseline:

Mountain bike **product breakdown** and its „major“ equipment

IPS process during development

- IPS framework / project setup

- Initial Preventive Maintenance Analysis

- Initial Logistic Support Analysis (LSA)

- Spare part provisioning / order administration

- Technical publication

- Training Needs Analysis (TNA) and training information

- In-service data feedback

### Pre-Mod

! The mountain bike accident !

30 minutes break ...

## Design modification after analysis of accident:

### Baseline:

Mountain bike **design modification of mountain bike front brake**

IPS process during in-service

- Result of accident investigation / update System FMECA / assessment logic Functional Failure Causes (FFC)

- Immediate feedback message to warn users of the pre-mod mountain bike

- Update of Front Brake breakdown / Maint. task requirements & analysis

- Update System Breakdown / update Illustrated Parts Catalogue / Supply

- Update DML / update data modules / produce and deliver TechPubs updates

- Update Training Situation Analysis / Task selection and analysis / objectives & media

## In the beginning ...

There was an idea:

**Why don't we design, manufacture and support a bicycle?**

BUT:

It needs to have the best support EVER!

(So we'll use the ASD/AIA S-Series IPS\* specifications to make sure!)

\*IPS = Integrated Product Support

## So we launched a project

We called the project **Mbike**, which is shorthand for **Mountain Bike**.

We also decided that this project would create a specific mountain bike, which for marketing purposes we would call **Yeti Beti**. The product code would be **YB**.

Oh, and yes, there would be several variants of the product, but we'll talk about the one that we decided to call **Yeti SBS Beti**.

While engineering started the work, the program decided that we might as well share that information with everybody, using the SX000i data exchange (and not only for support!).

Project	Data
Project Identifier	Mbike
Project Name	Mountain Bike
Project Duration	1 year

Product	Data
Product Identifier	YB
Product Name	Yeti Beti
Product Life	1/1/2019 - 31/12/2029
Product Variant Identifier	YBSB5
Product Variant Name	Yeti SB5 Beti

# And there were the usual program-level things...

Yes, we know this is cumbersome stuff, but a program, even an integrated product support (IPS) one, has to exchange a lot of information, such as:

- Contract data and contract clauses
- Work Breakdown Structure (WBS)
- Organizational Breakdown Structure (OBS)
- Cost Breakdown Structure (CBS)
- Planning

**Organization Breakdown Structure (OBS)**

Managing an IPS program is complex!

But, luckily, **SX000i** is capable of providing all this information to all affected parties.

# And knowing who was involved...

Of course, it was very important to know the project stakeholders, and what role(s) they would have:

- **Partners**
- **Suppliers**
- **Customers**
- **Etc...**

Organization Identifier	Organization Name	Organization Type	Organization Description
Yeti	Yeti	Manufacturer	Developer and manufacturer of the Yeti Beti product.
MF	Müller Fahrräder	Manufacturer (under license)	Manufacturer of the Yeti Beti bike under license
SBH3	Schultz Bike Hire	Operator	Bike hiring company
KHX784187	Bike Leasing AG	Customer; Owner; Operator	Bike leasing/hiring company
SBT	Sevilla Biking Tours	Customer; Owner; Operator	Bike hiring company
GBH	Granada Bike Hire	Operator	Bike hiring company
SDC-CA	San Diego County	Operator	Bike hiring company

This can include organizations but also individuals!

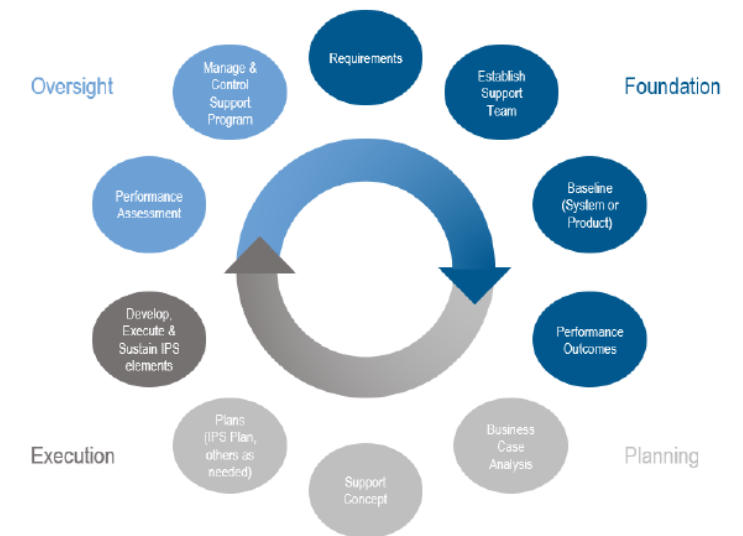

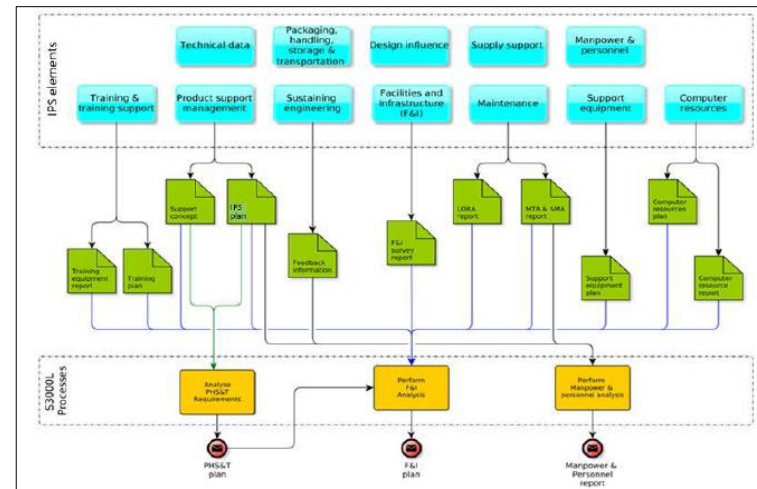

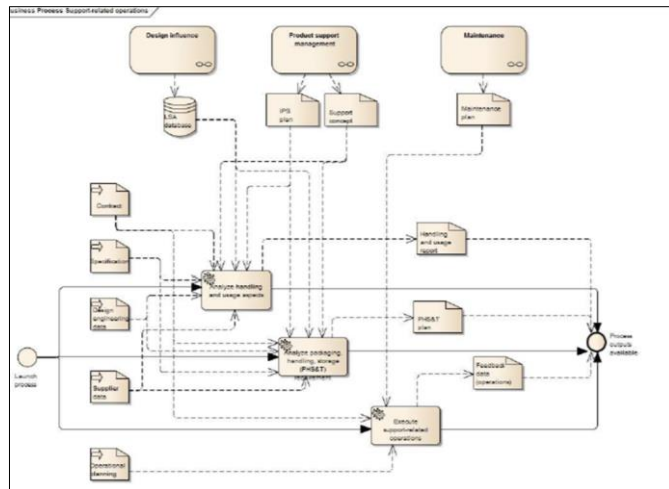

Person identifier	Person Name	Person Middle Name	Person Family Name	Person Prefix Title	Person Suffix Title	Person Dates
HS22	Hartmut		Schmidt		Jr.	
RS3	Ramon		Garcia			
HDM	Hans	Dieter	Müller			7/7/1989 -

Note that the bike would also be manufactured by somebody else under license!

# Now, how do we coordinate the IPS program?

**SX000i** provides the overall process about how an integrated products support program works, including the definition of the deliverables and the interfaces between specifications.

But it also defines **program guidelines, maturity levels, milestones and management metrics.**

IPS management should therefore be clear – so let's go!

SUPPORT MATURITY LEVELS	LIFE-CYCLE PHASES				
	PREPARATION PHASE	DEVELOPMENT PHASE	PRODUCTION PHASE	IN SERVICE PHASE	DISPOSAL PHASE
	Prepare the support	Design for Support	Develop Support	Acquire the Support	Provide the support
SM1	Operational Requirements Document (ORD)				
SM2	Usage Requirements Document (URD)				
SM3	System Requirements Document (SRD)				
SM4	Guidance Conference Document (GDC)				
SM5	System Requirements Review (SRR)				
SM6	Preliminary Design Review (PDR)				
SM7	Critical Design Review (CDR)				
SM8	Final Acceptance Review (FAR)				
SM9	Support Solution Review (SSR)				
SM10	Product Delivery / In-Service Date (ISD)				
SM11	In-Service Review (ISR)				
SM12	Out of Service Date (OSD)				

## But wait a minute... how about the basic IPS information?

Again, **SX000i** provides key IPS program-level information:

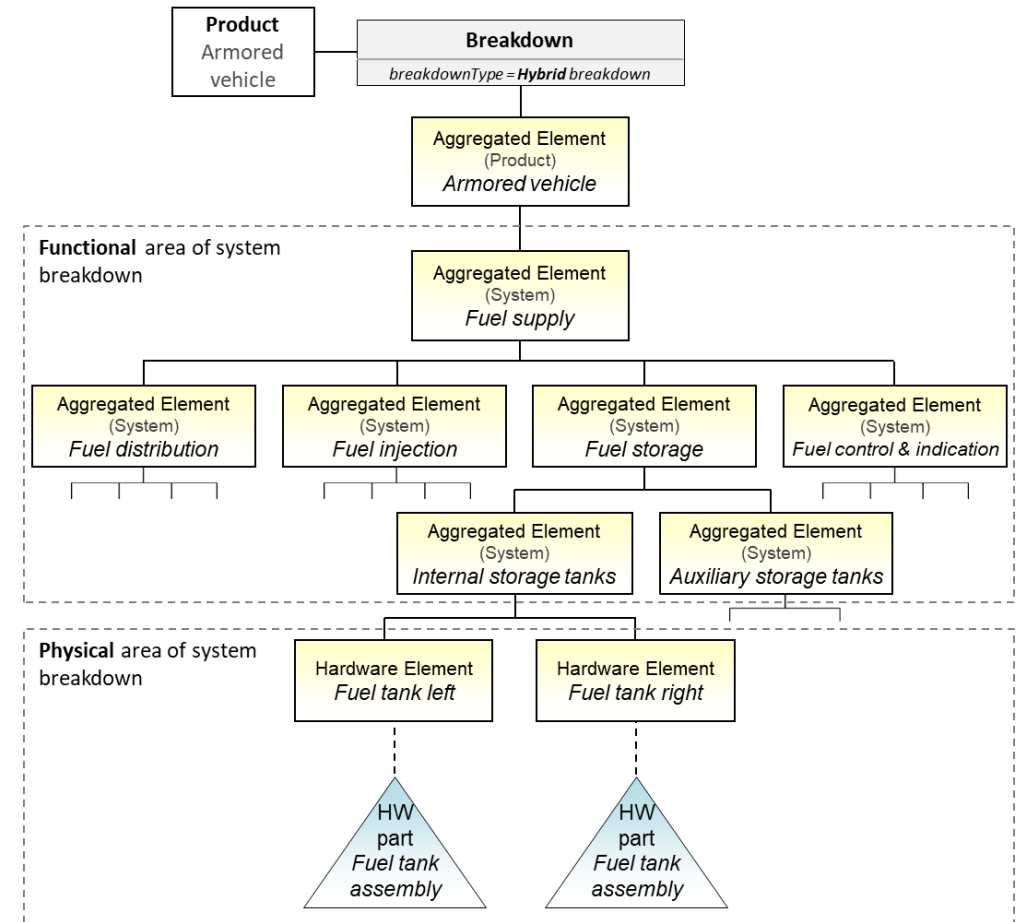

- **Support concept**: Manufacturer only delivers spares and support items and specialized repair. Training is by means of on-line courses.
- **Maintenance concept**: 4 levels (User On-Bike, User Garage, Bike Shop, Bike Manufacturer)
- **Sites**: 25 facilities with bike shop repair capability, main manufacturer repair site.
- **Person competencies**: 2 trades (mechanics and electronics), with 3 competence levels each, ranging from beginner to expert
- **Bike operations**: 2 operational scenarios (cycling, 400 h/year, and parking, 8360 h/year)
- **Fleet definition**: 1 fleet for every major bike hire company (average 100 bikes) + 1 fleet for the public in general (total 5000 bikes). Global fleet: 6000 bikes.

**So let's start now!**

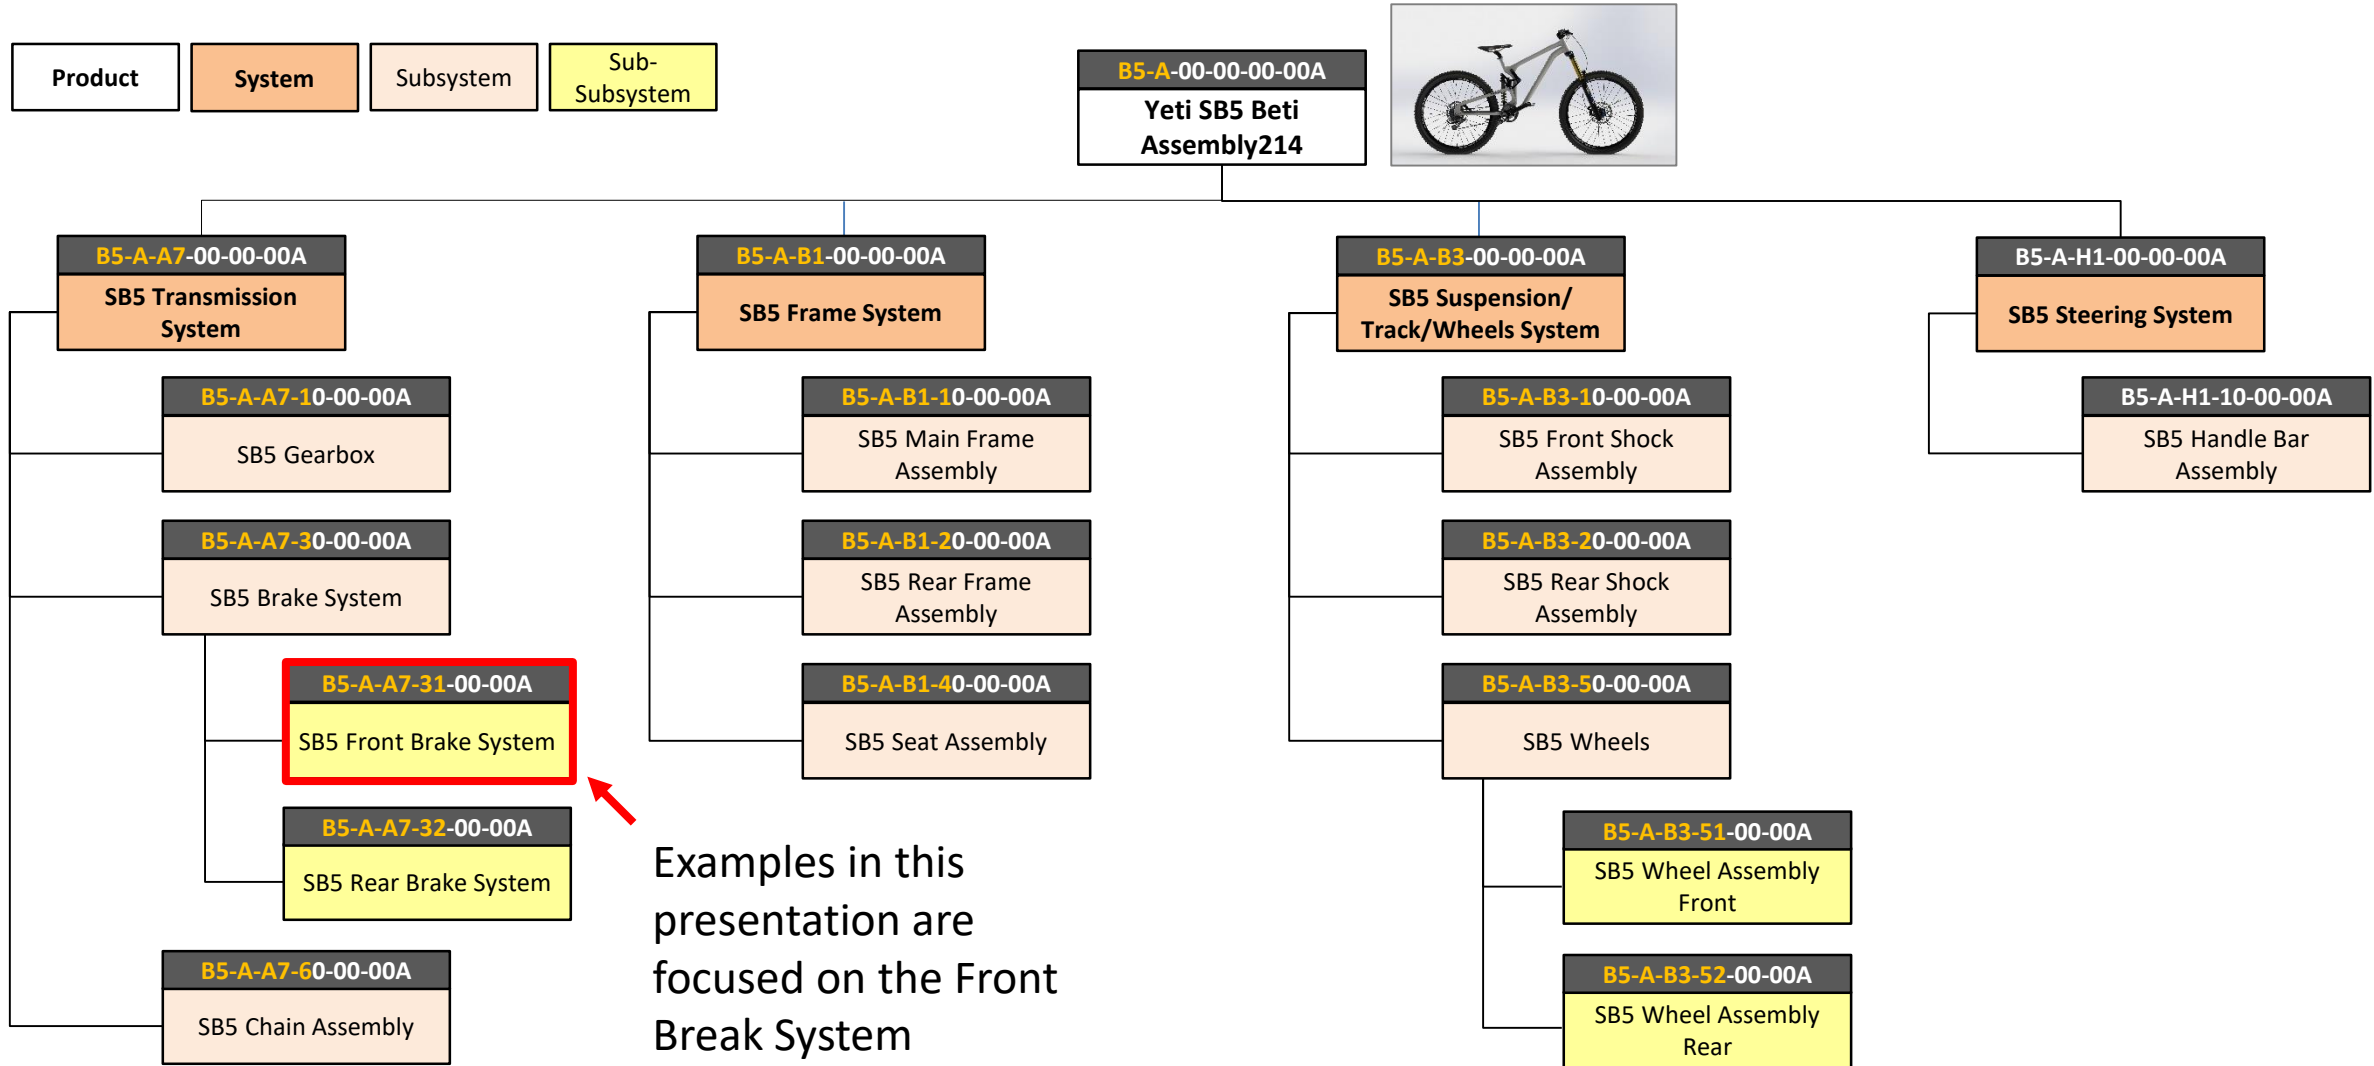

# Product breakdown (1)

The starting point of any IPS activities is the development of a **product breakdown** suitable for any analysis activities in the context of **product support**.

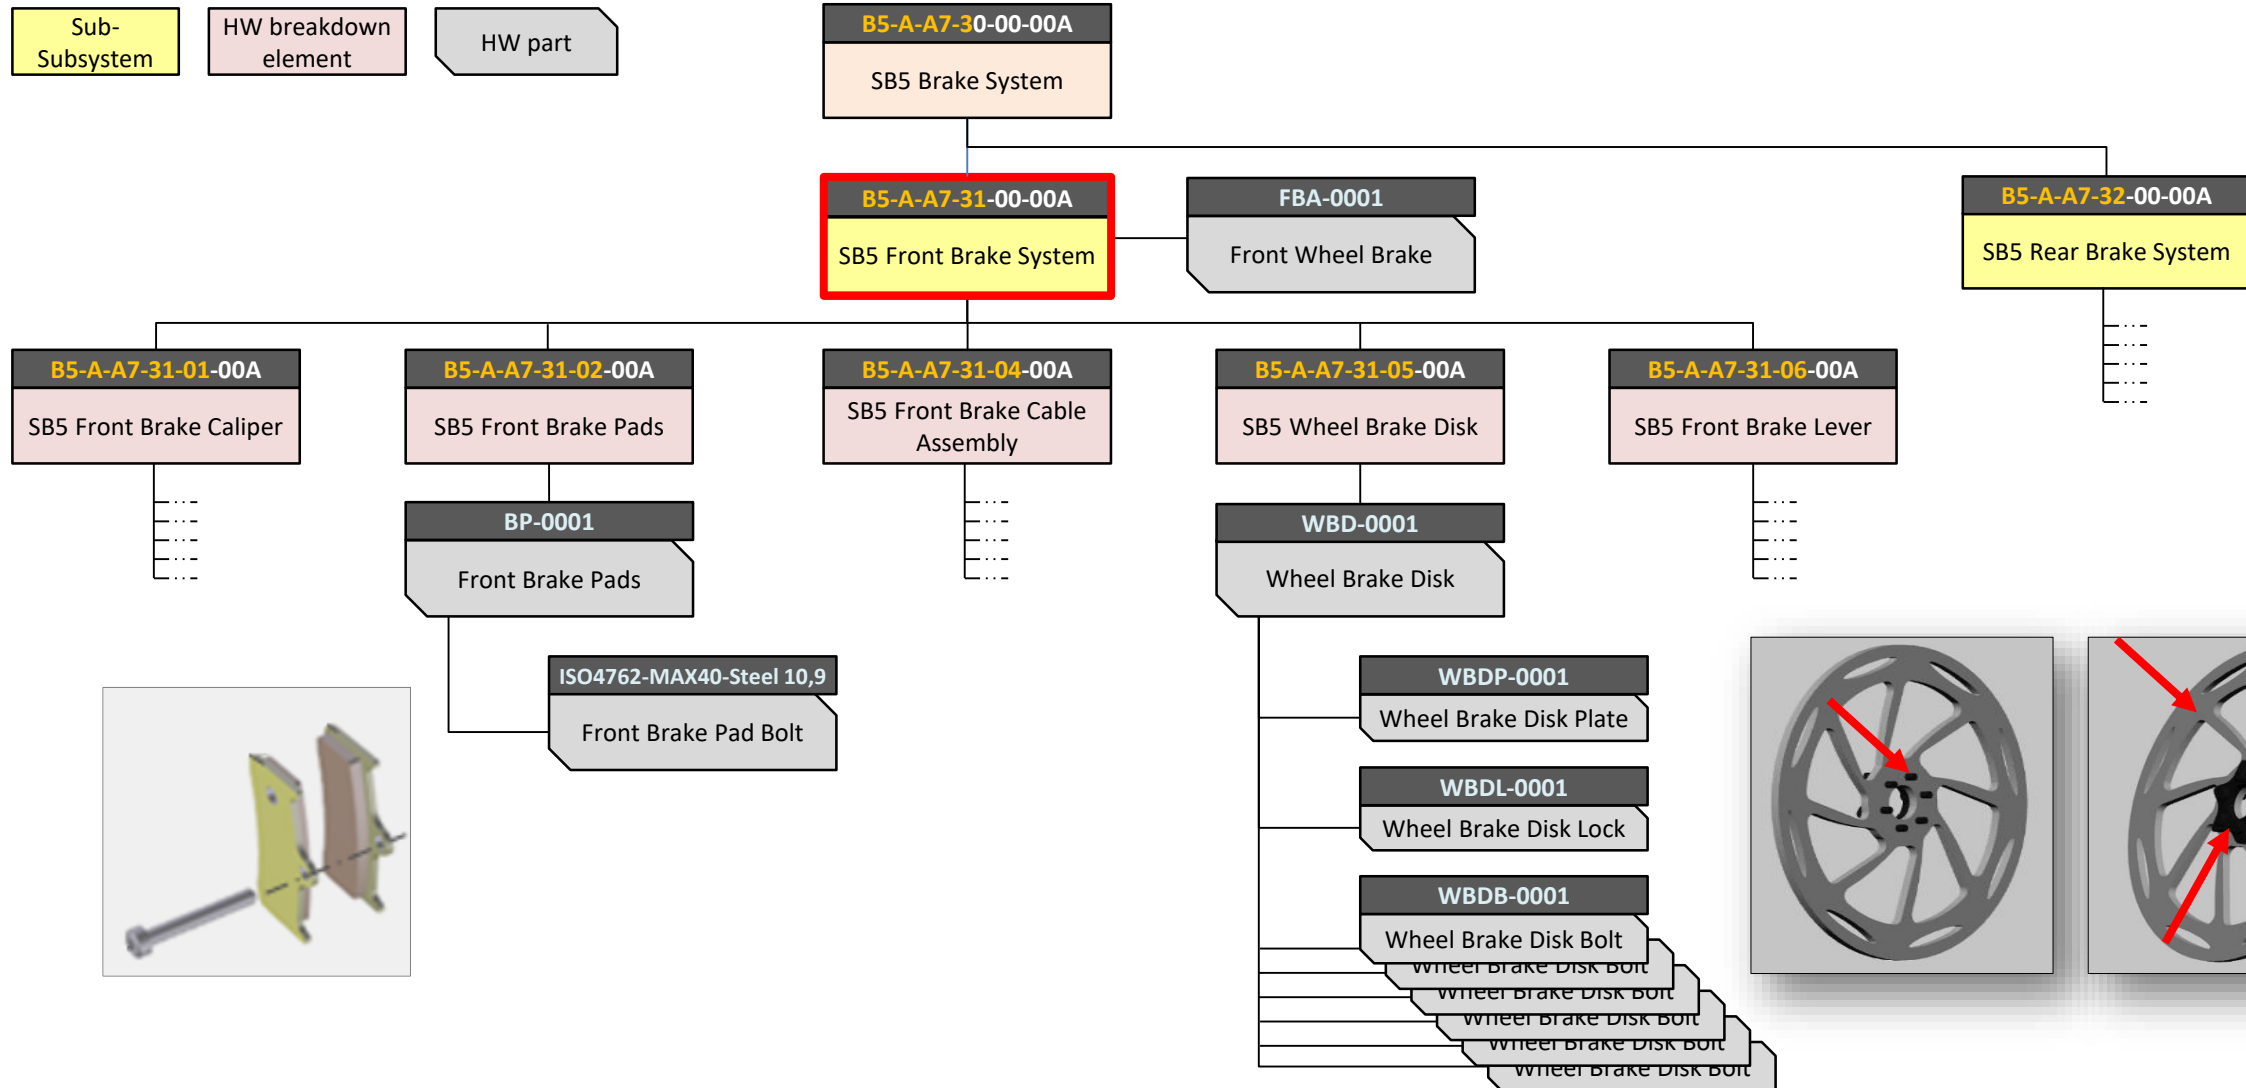

- The structure and hierarchy of the required **design drawings** will be done by **engineering**
- The required **breakdown elements** including the definition of a Breakdown Element Identifier (BEI) will be allocated by LSA following the baselines given in S3000L
- The **BEI** is a common key data element for S1000D and S2000M to provide the correct hierarchy of the corresponding IPS elements (technical publication, spare parts catalogue)

# Product breakdown (2) – the functional part

# Product breakdown (3) – the physical part

# S4000P Chapter 2.2 - Example System Analysis

## System description

- The front brake system is a manually operated hydraulic brake system

## Objective of analysis

- Define Preventive Maintenance Task Requirements
  - Intervals or Limits

# Preparation

## Preparation

Input

Process

Output

### Define use cases

- Ride the Mbike
- Store the Mbike
- Maintain the Mbike

### Identify stakeholder and requirements

- Cyclist
- Fleet manager
- Maintainer

### Define life cycle phases

- Usage
- Storage

### Define usage environment

- e.g. STANAG 2895
- Temperature: -30°C to +45°C
- Humidity: 30%-99%

# Input

Preparation

Requirements and constraints from use cases

**Input**

Functions with performance parameters

Process

Information on functional/logical/physical architecture

Output

Operational information and context

3D representation

System architecture/ Reliability Block Diagram (RBD)

System safety analysis

Technical FMECA for parts

Operating procedures

Sensors and software

Costs information

# Analysis process

Preparation

Input

Process

Output

• Analysis Relevant Candidate (ARC) selection with justification

- Interface S3000L

System FMECA

- Functional failures
- Failure Causes (FC)
- Probability
- Filtering of relevant failure modes

Task requirement types

- Interface S1000D

Definition of preventive measures

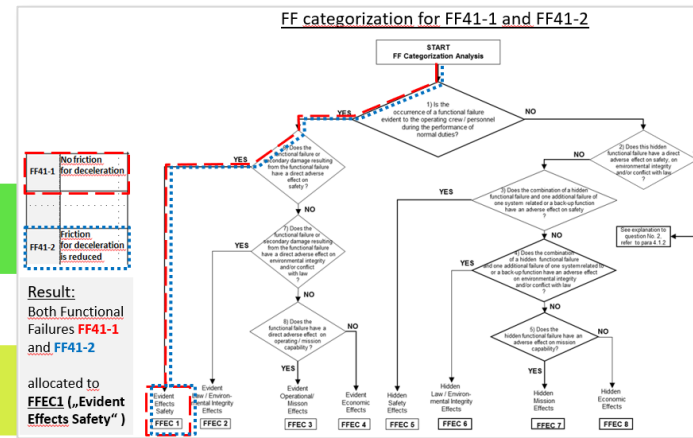

- Intervals and limits
- Failure distributions

Harmonization with master maintenance schedule

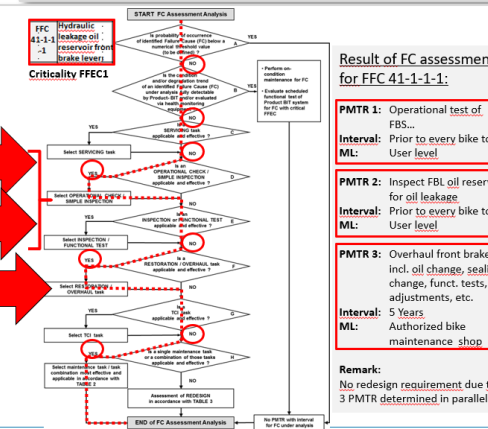

- Interface S3000L, S1000D

Product System Analysis		ARC / non-ARC determination		DETERMINATION QUESTIONS				ARC ?	REMARKS
S4000P CODE	Design Identification Drawing- Part No etc	S1000D DMC S3000L LCN / FSI / etc ...	ITEM NAME	Could a Functional Failure (FF) affect Product safety, including emergency systems and/or emergency equipment ?	Could a FF conflict with law and/or could the FF have a significant impact on environmental integrity (ecological damage) ?	Could a FF have an impact on mission/operational capability ?	Could a FF of the selected item have significant economic impact ?		
F4	MTB-BRS800-801	DA1-10	Front Brake	YES	NO	YES	NO	YES	Worst case: FF has safety impact during the downhill period

Remark on ARC determination: Brake system is selected as an Analysis Relevant Candidate with one YES answer

ASD S4000P SYSTEM ANALYSIS AIA/ASD Mountain Bike		ARC Logistic Control Number (LCN) or a similar Product Identification number		ARC nomenclature		Front Brake	
ARC FUNCTION AND FAILURE DATA SHEET / TABLE							
REF. no.	FUNCTION (F)	FUNCTIONAL FAILURE (FF)	REF. no.	FUNCTIONAL FAILURE EFFECT (FFE)	REF. no.	Functional Failure Cause (FFC)	Probability ranking of single FFC etc.
F41	Front brake to produce friction for deceleration	FF41-1: No friction for deceleration	FF41-1-1	Potential crash in case of braking events safety impact	FF41-1-1-1	Hydraulic leakage oil reservoir from brake lever	60%
			FF41-1-2		FF41-1-2-1	Front brake tube damaged	40%
			FF41-2		FF41-2-1	Front brake pads deteriorated	50%

Result of FC assessment for FFC 41-1-1-1:

- PMTR 1:** Operational test of FBS...  
**Interval:** Prior to every bike tour  
**ML:** User level
- PMTR 2:** Inspect FBL oil reservoir for oil leakage  
**Interval:** Prior to every bike tour  
**ML:** User level
- PMTR 3:** Overhaul front brake incl. oil change, sealings change, funct. tests, adjustments, etc.  
**Interval:** 5 Years  
**ML:** Authorized bike maintenance shop

Remark: No redesign requirement due to 3 PMTR determined in parallel

# Output

Preparation

To Engineering

Input

- Design improvements

Process

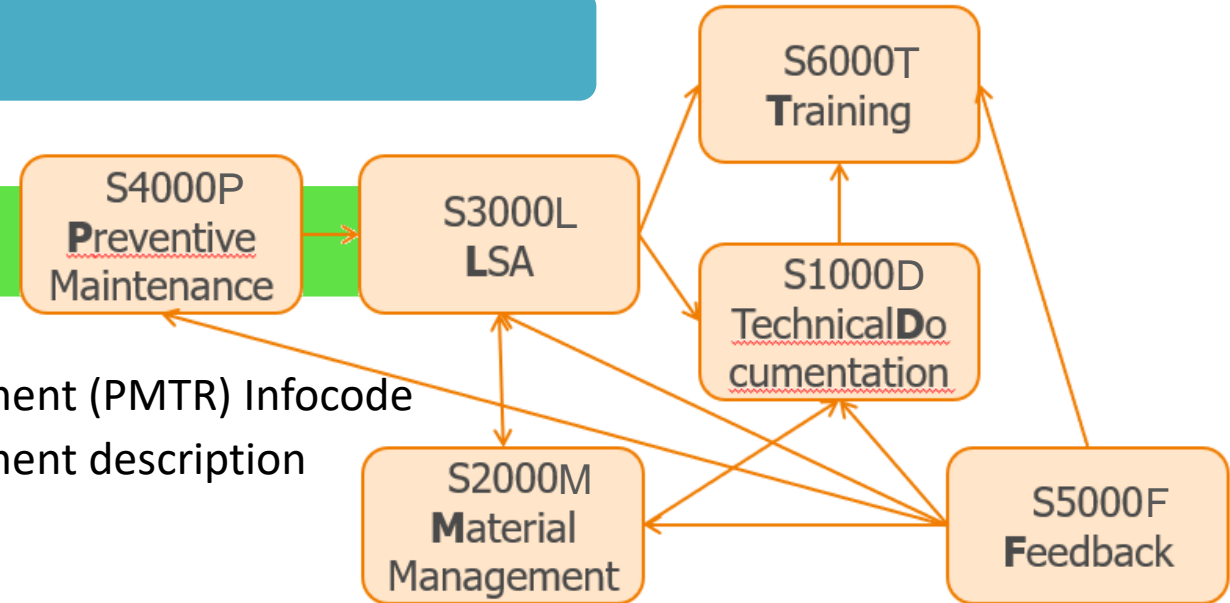

To S3000L

Output

- Breakdown Element Identifier (BEI)
- Preventive Maintenance Task Requirement (PMTR) Infocode
- Preventive Maintenance Task Requirement description
- Interval/limit with unit
- Functional Failure Effect Code (FFEC)
- Justification

To S3000L, S1000D, S6000T

- Functional description
- System FMECA
- Non-critical failures and their identification

# Result of ASD S4000P system analysis

## PMTR results for front brake system example:

Three PMTR with interval (= PMTRI) developed during Failure Cause (FC) assessment

<b>PMTR 1:</b>	<b>Operational test of Front Brake System by activation of Front Brake Lever</b>
Interval:	<b>Prior to every mountain bike tour</b>
Criticality:	FFEC1 - Evident Effects Safety
Maintenance Level (ML):	User level

<b>PMTR 2:</b>	<b>Inspection of Front Brake System hydraulic fluid</b>
Interval:	<b>Every 6 months</b>
Criticality:	FFEC1 - Evident Effects Safety
Maintenance Level (ML):	User level

<b>PMTR 3:</b>	<b>Overhaul of Front Brake System</b>
Interval:	<b>Every 5 years</b>
Criticality:	FFEC1 - Evident Effects Safety
Maintenance Level (ML):	Authorized shop level

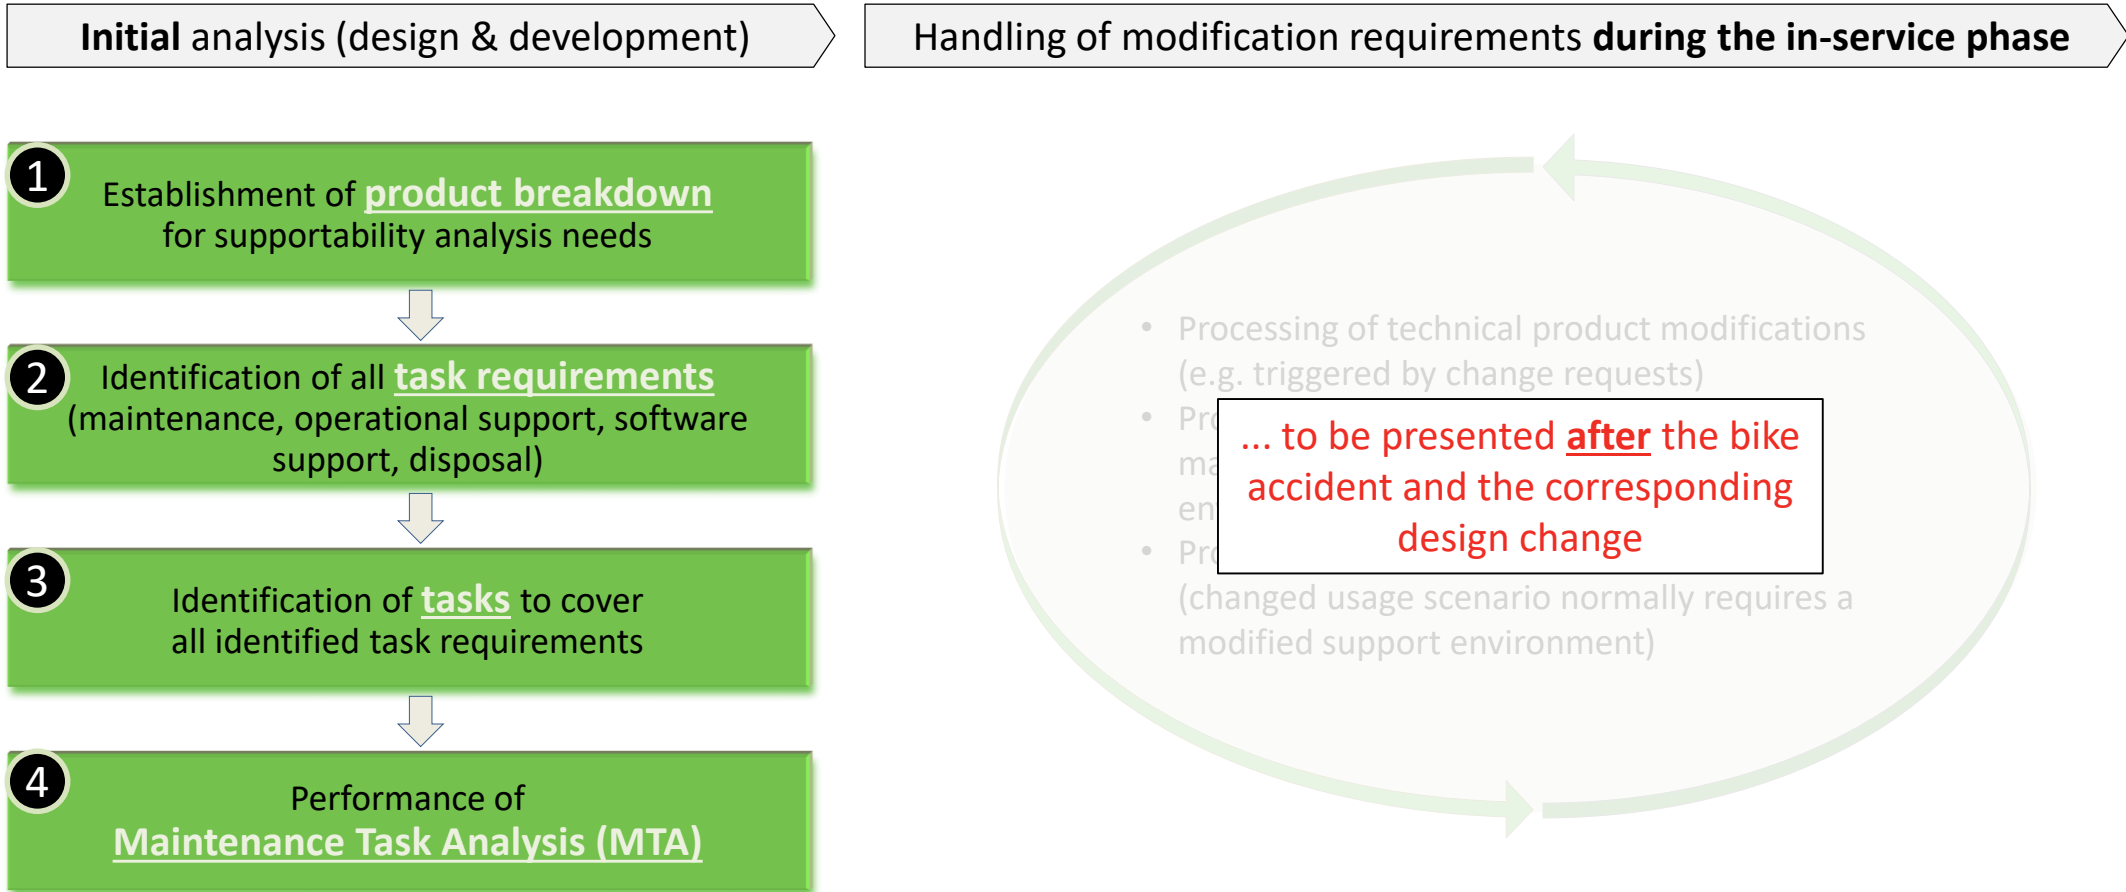

**Transfer of three PMTR into S3000L database**

# S3000L - Logistic Support Analysis

General analysis process, main steps (focused on **initial** analysis activities):

# S3000L - Example product breakdown (1) ⇒ Breakdown elements

**1** Establishment of **product breakdown** for supportability analysis needs

B5-A-00-00-00-00A	1.0	YBA-001	Yeti SB5 Beti Assembly214	T00001	PMTR1	Pre ride bike check	Rectifying	1.0				Hold the mountain bike secure for easy work	ML1

Identification of tasks

MTA - accumulated resources

# S3000L - Example (1) ⇒ MTA (personnel, task description)

**4** Performance of Maintenance Task Analysis (MTA)

- **Pre-ride bike check**  
 LSA candidate: B5-A-00-00-00-00A  
 Covering S4000P **PMTR1** requirement

Subtask identifier	Subtask description	Skill	Trade	Qty	Labour time [min]	Subtask duration [min]
		Inter-mediate	MECH			On the job
T00001-01	Check tyre pressure before riding.			1	1	1
T00001-02	Remove small pieces of flint that may have lodged in the tyres.			1	2	2
T00001-03	Check your stem and handlebars (especially where they meet). Check for signs of surface damages which are beyond mere scratches.			1	4	4
T00001-04	Check crank by making them parallel to the ground and holding each one. Check whether it can be pulled or pushed to the left or to the right (when looking from above). If possible, this indicates wear in the bearing of the bottom bracket.			1	2	2
T00001-05	Check pedals for movement and make sure that the chain rings aren't bent.			1	2	2
T00001-06	Check for smooth gear changes. Gear cables should be clean and without signs of corrosion. The pivot points on the derailleurs should move freely.			1	4	4
T00001-07	Check brake pads for sufficient life left for the duration and conditions of the planned ride (most pads have wear indicators to support the decision)			1	4	4
T00001-08	Pull lever and check equal brake pads contact to the rim to ensure even wear. Try to move the bike and verify the correct function of the brake.			1	2	2

## S2000M Initial Provisioning Data

In addition to the engineering breakdown, the following will also be considered:

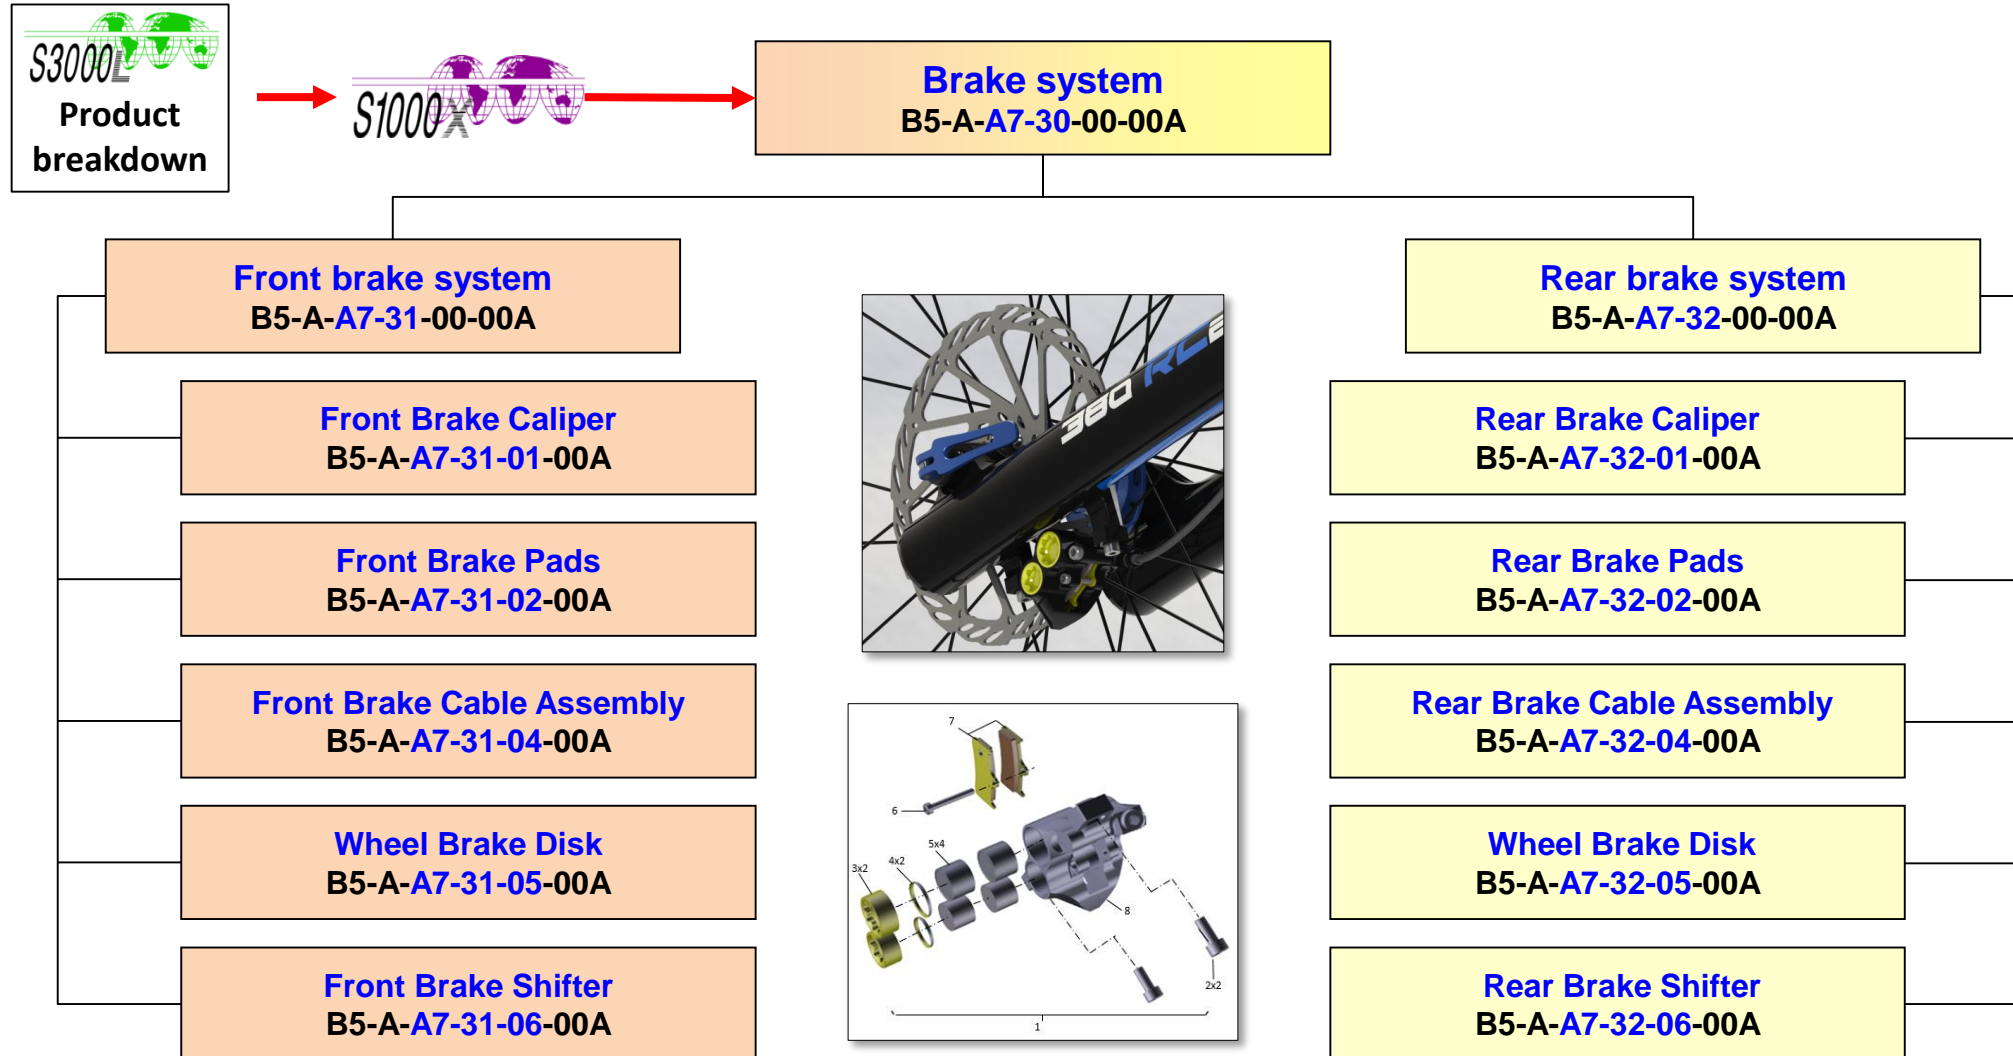

- Raw materials
- Consumables
- Repair kits
- Support equipment, tools and test equipment
- Shipment/Storage parts
- Category 1 (Special-to-Type) containers

**Note:** Initial Provisioning Data will be compiled **for all type of material** (e.g. mechanical parts, electrical components, electronic parts, avionic parts, structural parts)

# Hardware/System identification - Product breakdown

# Illustrated Parts Data (IPD) - Data modules (chapterized)

**Mountain bike - Illustrated parts data**

**B5-A-00-00-00-010-941A-D\_001-00**

**010: Figure number & variant**

**Brake system - Illustrated parts data**

**B5-A-A7-30-00-010-941A-D\_001-00**

**Front brake system - Illustrated parts data**

**B5-A-A7-31-00-010-941A-D\_001-00**

**Design data**

**Front brake system - Description of how it is made**

**B5-A-A7-31-00-00A-041A-D\_001-00**

# Maintenance planning - Data modules

Based on the maintenance planning information the **respective schedule data modules** will be produced.

Inspection tasks in relation to a limit/event (one data module per limit/event with all tasks)

**Mountain bike - Inspection**  
B5-A-05-40-00-00A-000A-D\_001-00

The **pre-ride inspection tasks** related to „MOUNTAIN BIKE“ are included in this data module. Based on S4000P (PMTR1) and S3000L (LSA candidate B5-A-00-00-00-00A) also the task:

- Operational test of Front Brake System by activation of Front Brake Lever

**Front brake system - Inspection**  
B5-A-05-40-00-01A-000A-D\_001-00

The **5-years-inspection tasks** for the system „FRONT BRAKE“ are included in this data module. Based on S4000P (PMTR3) and S3000L (LSA candidate B5-A-A7-31-00-00A) also the task:

- Overhaul Front Brake System

All inspection tasks in relation to a certain system/subsystem

**Front brake system - Maintenance lists**  
B5-A-05-20-A7-31A-000A-D\_001-00

All **maintenance/inspection tasks** relevant for system „FRONT BRAKE“ are listed in this data module. Based on S4000P (PMTR2 & PMTR3) and S3000L (LSA candidate B5-A-A7-31-00-00A) also the task:

- Inspection of Front Brake System hydraulic fluid
- Overhaul Front Brake System

All items with a time limit in relation to a system/subsystem

**Front brake system - Time limits**  
B5-A-05-10-A7-31A-000A-D\_001-00

All **items with a time limit in relation to Front Brake System**  
Example: **Brake pads**

- limitType = **On condition**
- threshold = **One month**

# Maintenance tasks - Data modules

Based on corrective maintenance task requirement (TR00009) and S3000L maintenance task analysis (LSA candidate B5-A-A7-31-02-00A) the following task is defined: „Replace front brake pads“:

## Front brake pads - Replace procedure B5-A-A7-31-02-00A-921A-D\_001-00

Maintenance level	ML2 (user garage)
Required conditions:	<ul style="list-style-type: none"> <li>Hold bike secure for easy work</li> <li>Do not actuate the brakes if the front wheel is removed</li> </ul>
Required persons:	1
Skill level:	A-Basic
Trade:	MECH
Estimated time:	25 min
Required Support Equipment:	<ul style="list-style-type: none"> <li>Bike stand special tool (BST-001)</li> <li>5mm allen key (ALLKEY5MM)</li> <li>Pliers (PLI-001)</li> </ul>
Required supplies:	– Paper cloth
Required spares:	<ul style="list-style-type: none"> <li>Front brake pads (BP-0001)</li> <li>Bolt (ISO4762-MAX40-Steel 10,9)</li> </ul>

**Based on Maintenance Task Analysis (MTA) in S3000L the steps will be produced in the procedural data module.**

**Example:**

**Preliminary requirements**

- Remove front wheel (refer to [B5-A-B3-51-01-00A-520A-D](#))

**Steps:**

- Remove old Front Brake Pads (refer to [B5-A-A7-31-02-00A-520A-D](#))
- Clean both caliper surfaces with paper cloth
- Install new Front Brake Pads (refer to [B5-A-A7-31-02-00A-720A-D](#))

**Closeup**

- Install front wheel (refer to [B5-A-B3-51-01-00A-720A-D](#))
- Test Front Brake System (refer to [B5-A-A7-31-00-00A-320A-D](#))

## Wheel front - Remove procedure B5-A-B3-51-01-00A-520A-D\_001-00

- Steps:**
- Unscrew the Front Brake Pad Bolt that fix the pads to the caliper
  - Extract pads from the caliper

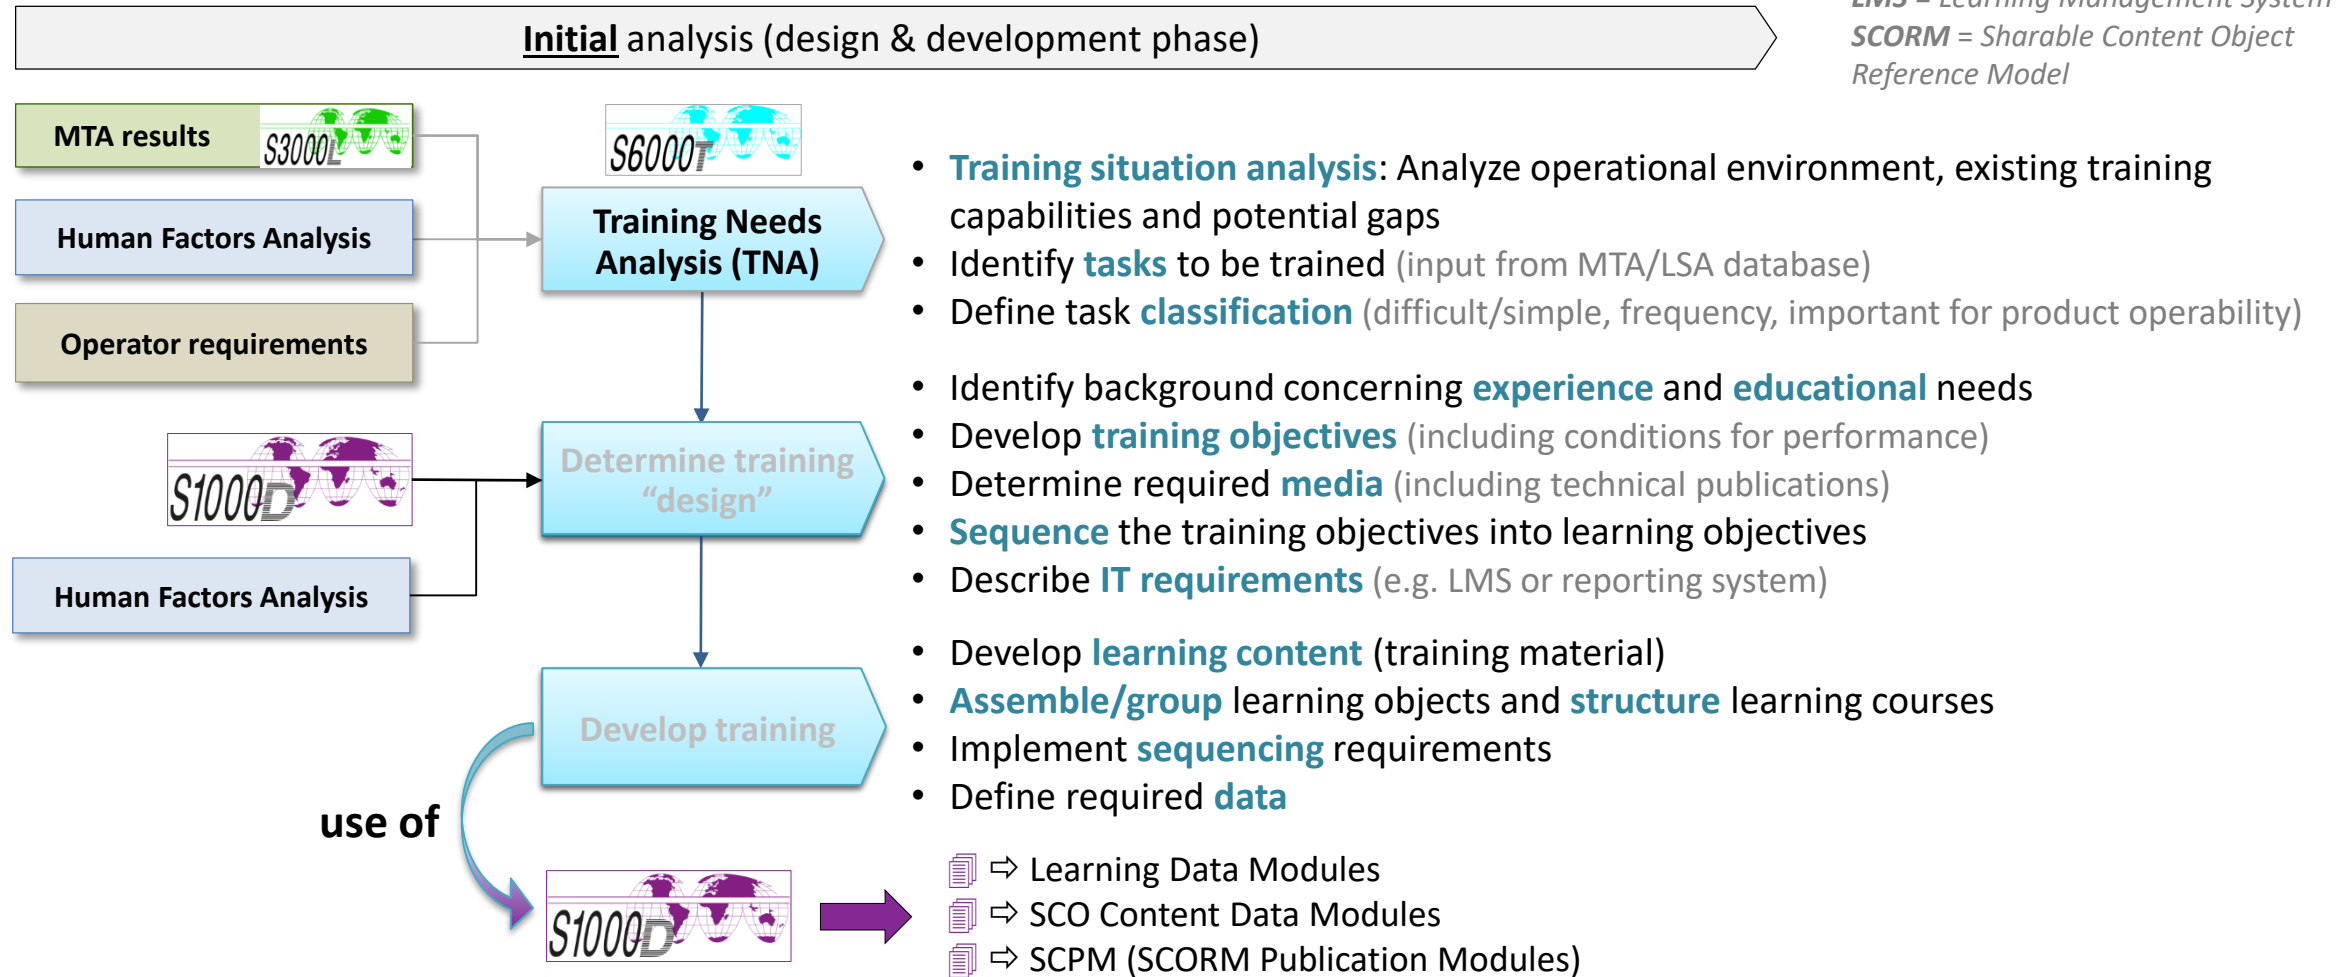

## Wheel front - Install procedure B5-A-B3-51-01-00A-720A-D\_001-00

- Steps:**
- Insert the two pads into the caliper
  - Screw the Front Brake Pad Bolt that fix the pads to the calliper

# S6000T - the main process

## General analysis and training development process:

# S6000T - Training situation, task selection and task analysis, TNA (1)

## Training Needs Analysis (TNA)

### Excerpt from training situation analysis result

- Formal training on mountain bike **recommended** due to complexity of the product
- **Advanced technology** (hydraulic brake), which was not installed in previous mountain bike models, requires **new skills** for mountain bike maintainers
- ...

### Task selection from LSA task list

BE identifier	Task ID	Task name	Difficulty	Importance	Frequency	DIF decision	Analyst decision	Task type	Skill decay
B5-A-00-00-00-00A	T00001	Perform pre-ride bike check	normal	moderate	often	no train	no train	Individual task	Low
B5-A-A7-31-02-00A	T00002	Replace front brake pads	moderate	high	low	train	train	Individual task	Medium

### Task analysis : «Replace front brake pads “ ...»

Task ID	Task name	Skill decay	Knowledge/ Skill level	Knowledge/Skill description
T00002	Replace front brake pads	Medium	Knowledge	Locate brake pads
			Comprehension	Explain how the brakes work
			Perceptual	Perform the procedure to replace the brake pads

Subtask analysis : «Replace front brake pads ...» (next slide)

# S6000T - Subtask analysis, TNA (2)

## Training Needs Analysis (TNA)

Task ID	Task name
T00002	Replace front brake pads

Training Needs Analysis (TNA) can be extended **down to the lowest level of activity performance** ⇒ each subtask/working step within a maintenance or operations support task can be analyzed.

Subtask description	Knowledge/Skill level	Knowledge/Skill description
Remove front wheel	<i>Refer to TNA for wheels</i>	<i>Refer to TNA for wheels</i>
Remove pads	<b>Knowledge</b>	Locate brake pads
	<b>Comprehension</b>	Explain functions of brake pads
	<b>Perceptual</b>	Use pad pusher
	<b>Perceptual</b>	Use allen wrench
Clean caliper surface	<b>Comprehension</b>	Explain function of brake disc
	<b>Perceptual</b>	Clean the caliper
Install pads	<i>Refer to „remove pads“</i>	<i>Refer to „remove pads“</i>
Install front wheel	<i>Refer to TNA for wheels</i>	<i>Refer to TNA for wheels</i>
Test front brake system	<b>Analyze</b>	Evaluate proper brake operation

# S6000T - Determine Objectives/Media

## Story of the bike accident

### AFTER A LITTLE COFFEE BREAK ...

*On a sunny Sunday morning, Hans-Dieter decided to take his three years old mountain bicycle ('Yeti SB5') for the first tour of the new mountain bike season.*

## Story of the bike accident

***During the last two years his bicycle was stored close to his car in the garage with humidity about an average level.***

***Prior to the first tour he checked in accordance with the instructions of the bike handbook:***

- ***the tyre pressures and condition***
- ***the hydraulic liquid reservoirs of the brakes for leakage***
- ***the operation of the brake system by activation of the brake levers***

***The planned tour was a real challenge, because it was the same as the Mountain Bike World Championship, which took place in June 2000 in the Sierra Nevada. The sun beats down from a cloudless sky, as our cycling friend set off.***

***Full of anticipation, Hans-Dieter stepped into the pedals and attacked the serpentine road.***

***After one hour, the asphalt was too boring and he turned into a forest path. At that time there was no sign of failure on his bike.***

## Story of the bike accident

***He noticed after the first longer downhill period that the front brakes were subject to a functional failure because they were not responding as positively as usual and they released only after a little time delay. ⚡***

***Our mountain biker just shrugged and rode on; nothing should be wrong as the bike had not been used in a serious way during the last two years.***

***His route led him ever higher until he arrived at the summit. Our friend took a deep breath and enjoying the sun on his back plunged down the mountain path.***

***Hans-Dieter took the first curves and as his speed increased he had to activate the front and rear brake intensively before the next curve. The front brake failed to release after the activation and he was thrown in a high arc over the front of his bike.***

***The world around him was black and he sank into deep unconsciousness.***

***The damaged bike was not far from his still body, and thankfully to he was found relatively quickly. Hans-Dieter was flown to a nearby hospital by the mountain rescue service.***

## Story of the bike accident

***After the accident Hans-Dieter sent his mountain bike to a well-known mountain bicycle shop for a detailed failure cause investigation and for a repair cost assessment.***

***In addition, the manufacturer, Yeti, was informed about potential legal consequences and/or claims for repair costs in case obvious manufacturer design and/or user manual failure(s) were identified.***

# Accident reporting

You cannot know if something has happened if you are not told and have no information.

It can be routine stuff... Or perhaps not!

Event										
Event Id	Confirmed status	Description	Event group	Occurrence date & time	Severity	Reported by	Affected item	Location	Product usage phase	Related to Event
EV2331	Confirmed	Mountain bike departed from hotel Nevada for 30/07/2022 16:30 mountain trail.	Operational	30/07/2022 10:00	None	Hans-Dieter (Yeti Beti App)	YBSB5 serial 46	Hotel Nevada, Sierra Nevada, Spain	Start	Before event EV2347
EV2347	Confirmed	Mountain bike left the road and crashed against tree. 30/07/2022 16:30 Witnesses report high speed. Driver unconscious and cannot declare. Evacuated to nearest hospital.	Accident	30/07/2022 11:22	Critical	Police	YBSB5 serial 46	AL-4402, Ohanes, Sierra Nevada, Spain	Descent	After event EV2331

Before you take any kind of action you **NEED** to find out **WHAT** has happened!

What damages?

What are the consequences?

Consequence		
Event Identifier	Consequence type	Consequence description
EV2347	INJ	Personal injuries
EV2347	MAT	Mountain bike inoperable, requires repair.

Damage due to Event					
Event Identifier	Damage Id	Damage family	Damage description	Estimated cost	Damage status
EV2347	DMG52	Personal injuries	Driver unconscious; unknown injuries		Confirmed 30/7/2022 16:30
EV2347	DMG53	Mechanical	Front wheel bent	180,00 €	Confirmed 30/7/2022 16:30
EV2347	DMG54	Aesthetic	Paint scratched	75,00 €	Confirmed 30/7/2022 16:31
EV2347	DMG55	Personal injuries	Driver - broken leg		Preliminary 30/7/2022 18:15
EV2347	DMG56	Personal injuries	Driver - broken arm		Unconfirmed 30/7/2022 18:15
EV2347	DMG57	Mechanical	Left pedal broken		Preliminary 30/7/2022 20:15
EV2347	DMG58	Mechanical	Saddle torn		Unconfirmed 30/7/2022 20:15

## There is a process for accidents ...

First, we report the accident to the authorities, by creating a safety issue

Safety Issue												
Document Id	Title	Description	Status	Creation date	Document type	Safety criticality	Reporting date	Assessment by	First identification	Applicable to Product variant	Applicable to PV Identifier	Associated to Event
SISS20220730A	Mountain bike Yeti SB5 Beti Brake failure	Accident caused by Mountain Bike Yeti SB5 Beti experiencing	Engineering investigation pending	30/07/2022	Safety issue	Major	30/07/2022	Yeti Beti	30/07/2022 11:22	Yeti SB5 Beti	YBSB5	EV2347

Then, of course, we inform the users about potential issues with the bike.

Safety warning												
Document Identifier	Associated to safety Issue	Title	Description	Status	Creation date	Document type	Safety criticality	Priority	Applicability dates	Applicable to Product variant	Applicable to PV Identifier	
SW16013	SISS20220730A	Mountain Bike Yeti SB5 Beti safety warning	Mountain Bike Yeti SB5 Beti might experience problems with brakes, causing loss of braking capability and potential accident. Preliminary recommended actions to the operators: - Do not use Mountain Bike Yeti SB5 Beti at high speeds - Avoid extensive brake usage - Take bike to shop for brake inspection.	Preliminary	01/08/2022	Preliminary safety warnng	Critical	High	01/08/2022	Yeti SB5 Beti	YBSB5	

# We have a brief look into the bike's history

First we look at the operational periods as sent out automatically by his Yeti Beti App.

Operational period										
PV Identifier	PV serial number	Period Identifier	Actual operational period	Operational period name	Period scheduled	Period result	Start	End	Operator	Reported by
YBSB5	46	OP140801-HD	1/8/2019 08:00 - 1/8/2019 17:00	Day trip Bike 46, Hans-Dieter	1/8/2019 08:00 - 1/8/2019 17:00	OK	Hans-Dieter garage, Munich, Germany	Hans-Dieter garage, Munich, Germany	Hans-Dieter	Hans-Dieter (Yeti Beti App)
YBSB5	46	OP140804-HD	4/8/2019 08:00 - 4/8/2019 17:30	Day trip Bike 46, Hans-Dieter	4/8/2019 08:00 - 4/8/2019 17:00	Delayed	Hans-Dieter garage, Munich, Germany	Hans-Dieter garage, Munich, Germany	Hans-Dieter	Hans-Dieter (Yeti Beti App)
YBSB5	46	OP160730-HD	30/7/2022 08:00 - 30/7/2022 11:22	Round trip Bike 46, Hans-Dieter	30/7/2022 10:00 - 30/7/2022 14:00	Accident	Nevada Hotel, Sierra Nevada, Spain	AL-4402, Ohanes, Andalucía, Spain	Hans-Dieter	Hans-Dieter (Yeti Beti App)

The last highlighted operational period is the accident.

But note that Hans-Dieter has not used the bike **for three years!**

And this was not his usual trip!

## We have a look at the Product Logbook

The configuration indicates all parts are the ones as delivered to the customer.  
The operator apparently does all the pre-checks... Except the last one!

### Logbook entries

Serialized item	Operating counter	Logbook entry Id	Date & time	Type	Entry	Associated to event
Yeti SB5 Beti s/n 46	678 km	MTB2k46-34	04/08/2019 17:30	Corrective maintenance	Changed flat tyre (Yeti Beti App)	EV1372
Yeti SB5 Beti s/n 46	678 km	MTB2k46-35	04/08/2019 18:20	Pre-check	Tyre pressure check (Yeti Beti App)	EV1373
Yeti SB5 Beti s/n 46	678 km	MTB2k46-36	04/08/2019 18:21	Pre-check	Checked brake lever oil reservoir for oil leakage (Yeti Beti App)	EV1373
Yeti SB5 Beti s/n 46	678 km	MTB2k46-37	04/08/2019 18:21	Pre-check	Checked operation of the brake system by activation of the brake lever. (Yeti Beti App)	EV1373
Yeti SB5 Beti s/n 46	678 km	MTB2k46-38	30/07/2022 7:50	Pre-check	Tyre pressure check (Yeti Beti App)	EV2331
Yeti SB5 Beti s/n 46	678 km	MTB2k46-39	30/07/2022 7:52	Pre-check	Checked brake lever oil reservoir for oil leakage (Yeti Beti App)	EV2331
Yeti SB5 Beti s/n 46	678 km	MTB2k46-40	30/07/2022 7:53	Pre-check	Activation of brake lever not detected (Yeti Beti App)	EV2331

But note that he did not perform (or at least recorded) any scheduled maintenance in three years!

 **ACCIDENT ENGINEERING INVESTIGATION AND UPDATE PROCESS**

# PREPARATION

## Preparation

Input

Process

Output

### Collect data

- All documentation and logs
- Maintenance data and findings
- Maintainer notes
- Local maintenance policies

### Product information

- As maintained configuration
- Previous analysis results

### Logistics configuration management

- S1000D
- S5000F
- S3000L
- S4000P

# INPUT: INDUSTRY ACCIDENT INVESTIGATION

Preparation

Input

Process

Output

## Finding 1:

Very rough surface of the PAD BOLT in its central area due to deterioration; (bolt diameter is below the acceptable minimum tolerance value)

## Finding 2:

BRAKE PAD SET on upper gliding surfaces corroded, corrosion also on corresponding surfaces inside the BRAKE CALIPER HOUSING

# INPUT: RESULTS OF INDUSTRY ACCIDENT INVESTIGATION

Preparation

**Input**

Process

Output

## Expert statement No. 1 related to finding 1:

- **PAD BOLT** (PRE MOD) was made of corroding/oxidizing steel;
- **Deterioration process** caused **material wear** at the central area of the bolt surface ;
- Rough bolt **material surface prohibited the BRAKE PAD SET to glide on the PAD BOLT**

## Expert statement No. 2 related to finding 2:

- **BRAKE PAD SET** installation **without gliding paste** (PRE MOD).
- All **gliding surfaces** of the BRAKE PAD SET **corroded**.
- **High friction on gliding surfaces** inside the BRAKE CALIPER HOUSING.

## Expert summary:

- Corrosion/oxidation processes caused **high friction** on relevant **gliding surfaces**;
- After strong front brake activation **BRAKE PADS clamped** inside the BRAKE CALIPER HOUSING and on the PAD BOLT surface;
- **No subsequent brake release** after front brake activation **caused accident**.

# PROCESS

Preparation  
Input  
Process  
Output

## Review system FMECA

- Update system FMECA
- Add functional failure
- Add functional failure cause
- Add functional failure cause
- Determine possible task requirements
- Review applicability and effectiveness

## Pattern

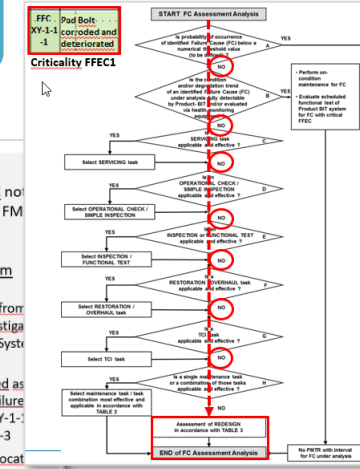

- Review analysis
- Determine difference
- Document results

ASD S4000P SYSTEM ANALYSIS AIA/ASD Mountain Bike		ARC Logline: Current Number (LON) or a similar Identification Number		BEI: DA1-10 P/N: MTB-BRS800-801				
ARC FUNCTION AND FAILURE DATA SHEET / TABLE		ARC nomenclature		Front Brake				
Date	FUNCTION (F)	REP. no.	FUNCTIONAL FAILURE (FF)	REP. no.	FUNCTIONAL FAILURE EFFECT (FFE)	Functional Failure Cause (FFC)	Probability ranking of single FFC	Remarks update information etc.
***	***	***	***	***	***	***	***	***
F-XV	Front brake to produce friction for deceleration	FF-XY-1	Front brake does not release after brake activation	FFE-XY-1	Potential crash after braking event; safety impact	FFC XY-1-1 Pad Bolt corroded and deteriorated FFC XY-1-2 Brake Pad not gliding surfaces lubricated FFC XY-1-3 Brake Caliper Housing not gliding surfaces lubricated	50% 25% 25%	Added; material: (S4000) M4x30x3 STEEL 12.9 Added; material: (S4000)1 Added; material: (S4000)001

**Check result:**  
New FF and FFC not listed in System FMEA before.

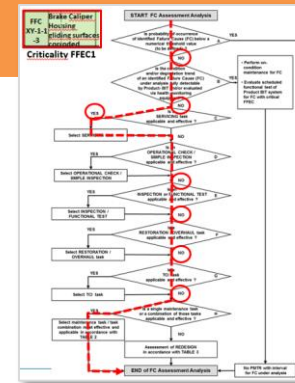

**Update of System FMEA:**

1. New FF-XY-1 from accident investigation added in the System FMEA.
2. Findings added as Functional Failure Causes FFC-XY-1-1 to FFC-XY-1-3
3. FFEC1 also allocated to FF-XY-1 during FC assessment

**Explanation of answers:**  
PMTR like servicing (lubrication), inspection, TCI are applicable from the technical point of view but they are not effective enough!  
(too much effort for customers, manufacturer in terms of managing PMTR etc.)

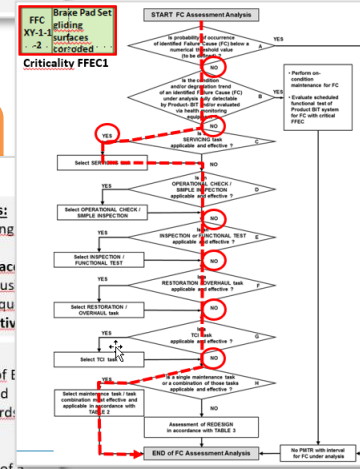

**RESULT:**  
Due to FFEC1 a redesign of the Pad Bolt is mandatory.

**Explanation of answers:**  
Both preventive servicing „clean“ and „lubricate“ gliding surfaces of the Brake Caliper Housing are identified in this sequence as applicable and effective.

**RESULT:**  
Clean gliding surfaces of Brake Caliper Housing first and lubricate them afterwards.

**Interval:**  
With every installation of a Brake Pad Set.

**Explanation of answers:**  
Both preventive servicing tasks „clean“ and „lubricate“ gliding surfaces of both Brake Pads are identified in this sequence as applicable and effective.

**RESULT:**  
Clean gliding surfaces of Brake Pad Set first and lubricate them afterwards.

**Interval:**  
In common with every installation of a Brake Pad Set.

# OUTPUT

Preparation

Input

Process

**Output**

To Engineering

- Design Change

• To S3000L

- New Task Requirements

To avoid **finding 1** in the future, a **technical modification** of the pad bolt is required:

**Installation of a new corrosion-free pad bolt (POST MOD)**  
**Old pad bolts shall be replaced as soon as possible**

To avoid **finding 2** in future, the following **modifications concerning task performance** are **mandatory**:

**Every brake pad set must be installed using graphite gliding paste after cleaning of relevant gliding surfaces.**

**Two warning remarks** are to be added in the **bike maintenance manual**:

**Severy injury may result if brake pad set is installed without graphite gliding paste on indicated surfaces.**

**Keep brake disc surface free from any gliding paste or oil contamination during maintenance. Clean brake disc after every brake maintenance.**

Transfer of output to S3000L

# Launch safety instructions to affected users!

Now we know what has happened, we need to warn the impacted owners/users of the PRE MOD Bike, so as to take preventive measures.

We do that by means of a safety instruction:

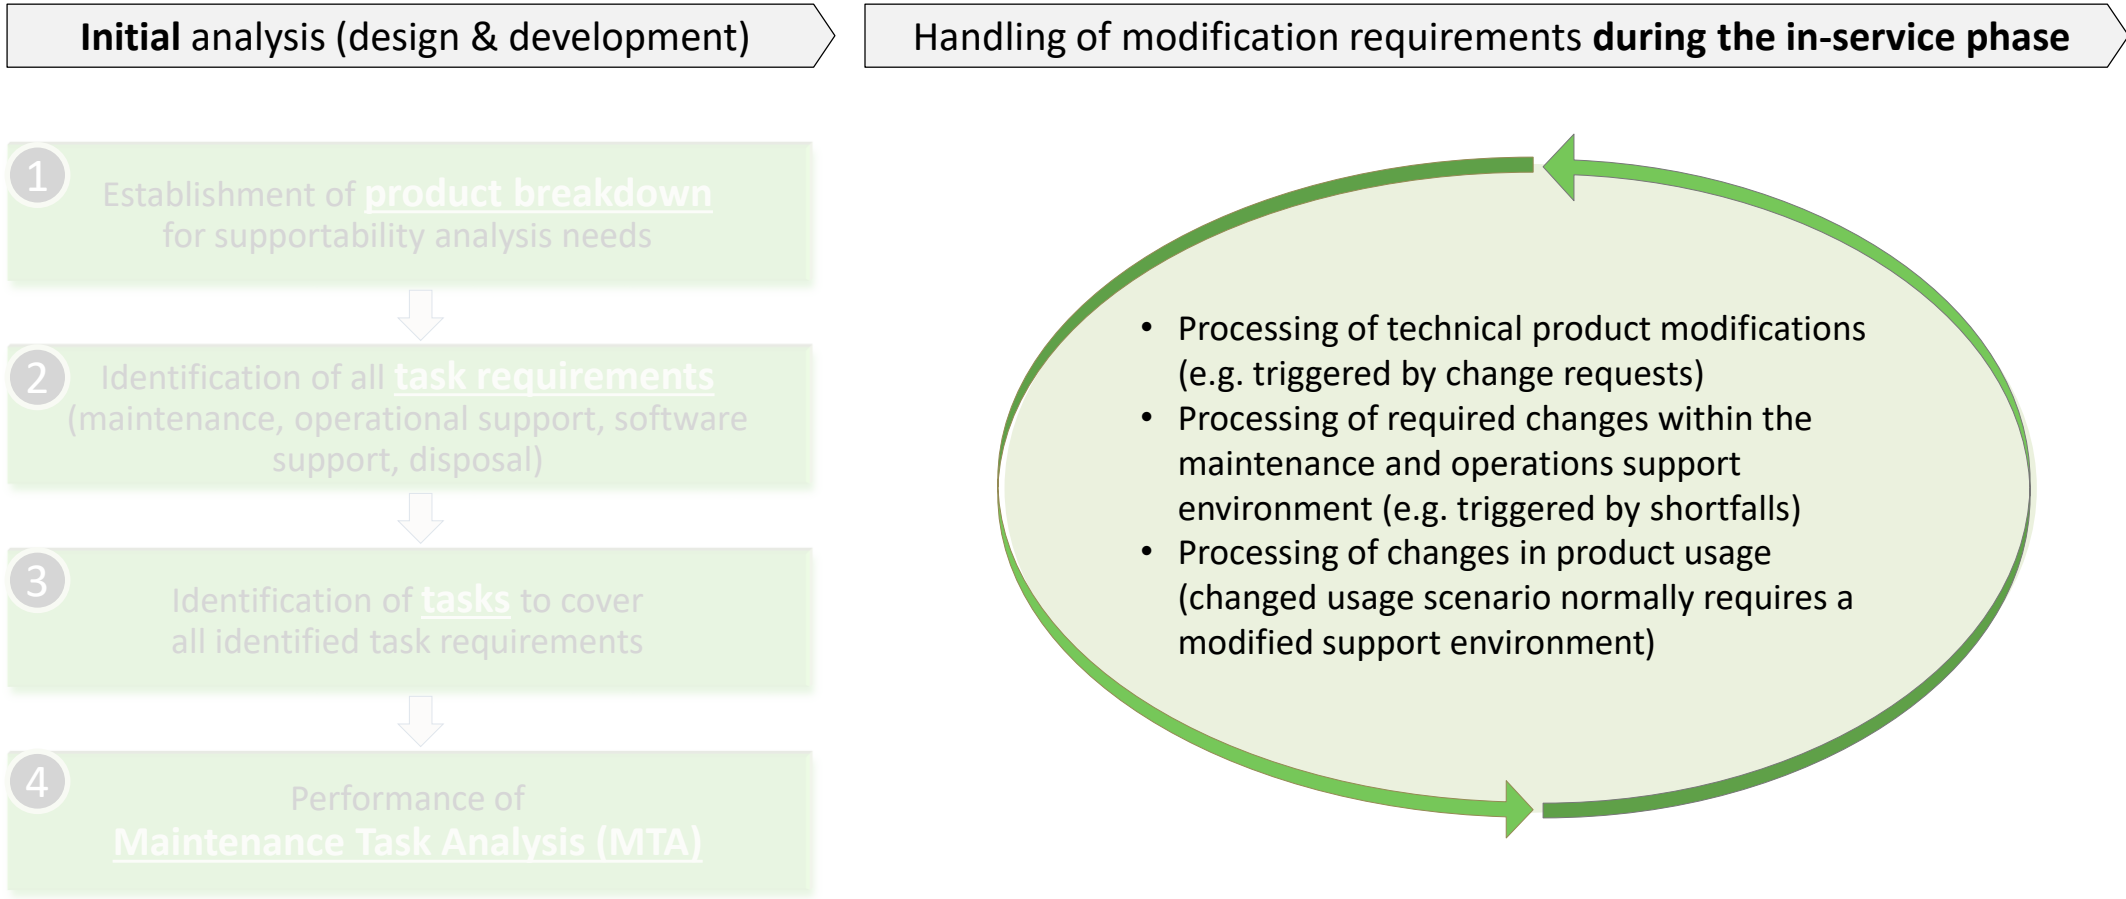

Safety Instructions									
Document Id	Associated to safety Issue	Title	Description	Status	Creation date	Document type	Safety Criticality	Safety priority	Applicability dates
SIN20220803A	SISS20220730A	Yeti SB5 Beti Brake safety instructions	Special safety instructions associated to Yeti SB5 Beti brake MTB-BRS800-801	Approved	14-8-22 13:19	Special safety instructions	Major	High	14/08/2022 - 31/12/2022

This instruction includes several actions to be performed:

Required Safety Action						
Safety Instruction Id	Safety action identifier	Type	Description	Priority	Release date	Required implementation date
SIN20220803A	1	Mandatory	<b>The BRAKE PAD SET must always be installed using graphite gliding paste on clean gliding surfaces (also inside the Brake Caliper Housing)-</b>	High	14.08.2022	30.08.2022
SIN20220803A	2	Mandatory	Pending formal MB manual update, <u>add manually the following statements to the MB manual:</u> - „Severe injury may result in case of installation of the BRAKE PAD SET without graphite gliding paste on indicated surfaces „Keep BRAKE DISK surface free from any gliding paste or oil contamination during maintenance. Clean BRAKE DISK after brake maintenance.“	High	14.08.2022	30.08.2022

# S3000L - Logistic Support Analysis

General analysis process, main steps (focused on **initial** analysis activities):

# Product breakdown/parts ⇒ POST MOD

**1** Establishment of **product breakdown** for supportability analysis needs

Part identifier	Part name	Remark	PRE MOD	POST MOD
...	...			
FBA-0001	Front Brake System	Old part (to be eliminated)	x	
FBA-0002	Front Brake System	New part (based on brake pads with new bolt)		x
FBAD-0002	Front Brake Adapter			
FBB-0001	Front Brake Bolt			
FBCL-0001	Front Brake Caliper			
FBAN-0001	Front Brake Adjuster knob			
BP-0001	Front Brake Pads	Old part (to be eliminated)	x	
BP-0002	Front Brake Pads	New part (based on new bolt)		x
ISO4762-MAX40-STEEL 10.9	Front Brake Pad Bolt	Old part (to be eliminated)	x	
ISO4762-M4X40-A2	Front Brake Pad Bolt	New part		x
FBADJ-0001	Front Break Adjuster			
...	...			
EXXOL D60	Naphtha Aliphatic	New consumable		x
MOLYKOTEBR2 Plus	Graphite gliding paste	New consumable		x
...	...			

**Summary of consequences for parts list:**

- **PRE MOD** Front Brake Pad Bolt, Front Brake Pads and Front Brake System will disappear from the parts list and are replaced by the **POST MOD** parts
- **Two new entries** for consumables

# Product breakdown/breakdown elements ⇒ POST MOD

## 1 Establishment of product breakdown for supportability analysis needs

BEI	BE revision	Breakdown Element Name	BE Type	Part identifier	Remark
...	...	...	...	...	
B5-A-A7-30-00-00A	1.0	SB5 Brake System	Subsystem	N/A	
B5-A-A7-31-00-00A	2.0	SB5 Front Brake System	Sub-Subsystem	FBA-0002	BE realization updated, new part identifier due to new design
B5-A-A7-31-01-00A	1.0	SB5 Front Brake Caliper	Equipment	FBCL-0001	
B5-A-A7-31-02-00A	2.0	SB5 Front Brake Pads	Equipment	BP-0002	BE realization updated, new part identifier due to new design
B5-A-A7-31-04-00A	1.0	SB5 Wheel Brake Disk	Equipment	WBD-0001	
B5-A-A7-31-05-00A	1.0	SB5 Front Brake Cable Assembly	Equipment	FBCA-001	
B5-A-A7-31-06-00A	1.0	SB5 Front Brake Lever	Equipment	FBS-0001	
B5-A-A7-32-00-00A	1.0	SB5 Rear Brake System	Sub-Subsystem	RBA-0001	
B5-A-A7-32-01-00A	1.0	SB5 Rear Brake Caliper	Equipment	RBCL-0001	
B5-A-A7-32-02-00A	1.0	SB5 Rear Brake Pad	Equipment	RBP-0001	
B5-A-A7-32-04-00A	1.0	SB5 Rear Brake Cable	Equipment	RBC-0001	
B5-A-A7-32-05-00A	1.0	SB5 Rear Brake Shifter	Equipment	RBS-0001	

### Summary of consequences for **breakdown elements**:

- **PRE MOD** realization of SB5 Front Brake Pads and SB5 Front Brake System will disappear from the product breakdown and are replaced by the **POST MOD** realization.

# Maintenance Task requirements ⇒ POST MOD

**2** Identification of all **task requirements** (maintenance, operational support, software support, disposal)

Sources for task requirements are, beyond others, technical analysis activities in the environment of Maintainability/Reliability:

- FMEA/FMECA
- Damage Analysis
- Preventive Maintenance Analysis
- Special Event Analysis

BEI	BEI revision	Part identifier	BE name	Task requirement Identifier	Task requirement source	Task requirement description	Interval/threshold

...	...	...	...	...	...	...	...

## Summary of consequences for task requirements:

- The task requirement to perform an **operational test** of the Front Brake System before every operation of the mountain bike is not impacted by the design change. Means, this task requirement remains unchanged.
- The task requirement to **replace the Front Brake Pads** if they are worn out is not impacted by the design change. Means, this task requirement remains unchanged.  
**However:** Due to the modified Brake Pad Bolt and due to the need to grease the sliding surfaces, a change in the task performance is expected.
- **Overhaul task after 5 years still applicable**, but modified due to design change (new brake pad bolt)

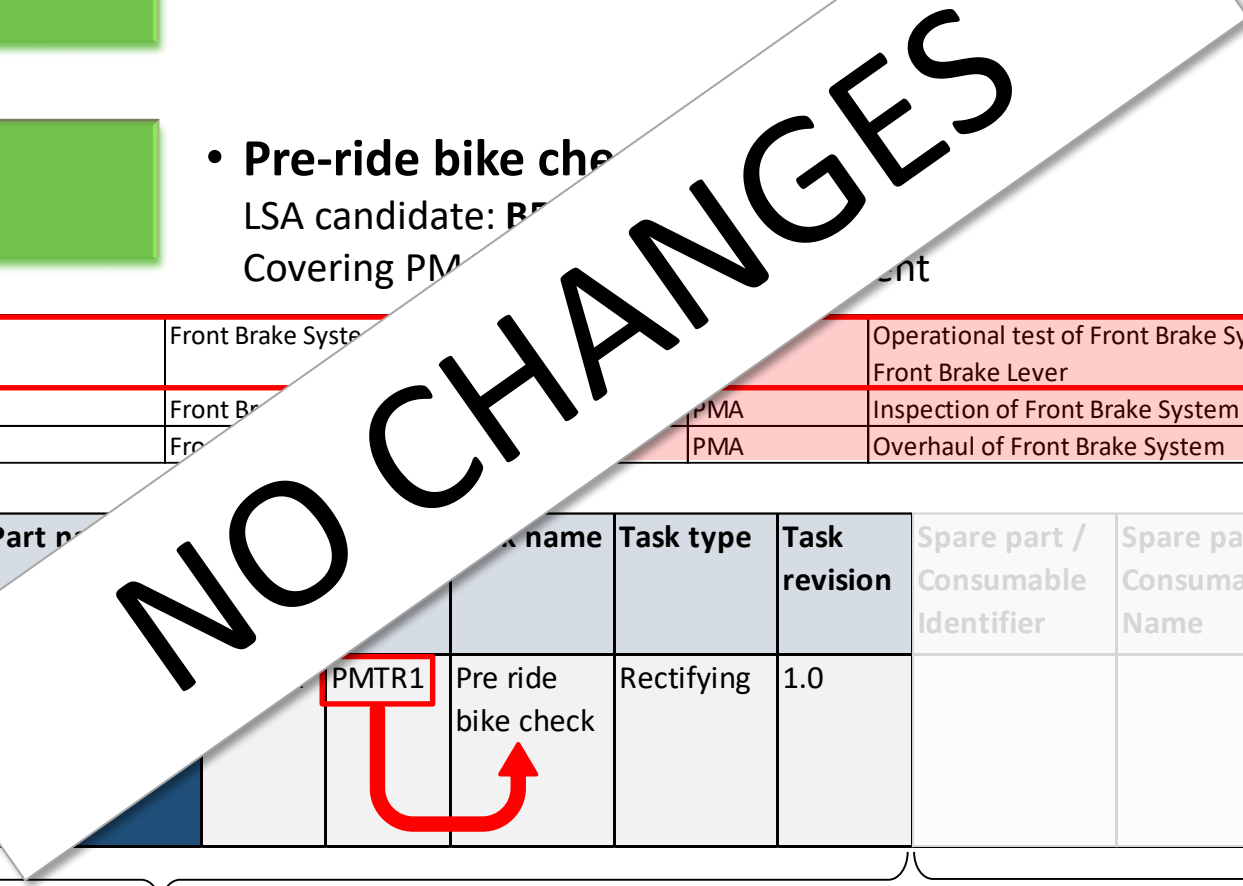

# Example (1) ⇒ task identification + MTA (resources) ⇒ POST MOD

2 Identification of all **task requirements** (maintenance, operational support, software support, disposal)

3 Identification of **tasks** to cover all identified task requirements

- **Pre-ride bike check**

T00001-05	Check pedals for movement and make sure they are secure.	1	2
T00001-06	Check for smooth gear changes. Check derailleurs for signs of corrosion. The pivot points on the derailleurs should be clean and free of dirt.	1	4
T00001-07	Check brake pads for sufficient wear. Check the conditions of the planned ride (most pads have wear indicators to support this). MECH	1	4
T00001-08	Pull lever and check equal brake pressure on both sides. Spin the rim to ensure even wear. Try to move the bike and verify the correct function of the brake.	1	2

Task description

MTA - personnel

# Example (2) ⇒ POST MOD task modification requirements

2 Identification of all **task requirements** (maintenance, operational support, software support, disposal)

3 Identification of **tasks** to cover all identified task requirements

4 Performance of **Maintenance Task Analysis (MTA)**

## • Replace front brake pads

LSA candidate: **B5-A-A7-31-02-00A**

Covering task requirement **TR-00009** from **Tech FMEA**

BEI	BE revision	Part Identifier	Part name	Task ID	Task Req.	Task name	Task type	Task revision	Spare part / Consumable Identifier	Spare part / Consumable Name	Support Equipment (SE)	Support Equipment name	Conditions and safety	ML
B5-A-A7-31-02-00A	1.0	BP-0001	Front Brake Pads	T00002	TR-00009	Replace Front Brake Pads	Rectifying	1.0	PC-1000 ISO4762-MAX40-Steel 10,9 BP-0001	Paper cloth Bolt Brake Pad Set	BST-001 ALLKEY5MM PLI-001	Bike stand special tool 5mm allen key Pliers	(1) Hold the mountain bike secure for easy work (2) Do not actuate brake when the wheel is removed (this would cause a bleeding of the brake unit)	ML1

Identification of tasks (points to columns 4-7)      MTA - accumulated resources (points to columns 9-15)

Required LSA update due to the design change:

- **New spare parts** to be used within the task (remember: new bolt to be used (included in Brake Pads Set!))
- **New consumables** to be considered during the Brake Pad Set installation
- **New support equipment** to be considered during the Brake Pad Set installation
- **New warnings & cautions** to be considered during the Brake Pad Set installation
- **New task steps** to be considered during the Brake Pad Set installation

Subtask Identifier	Subtask description	Skill	Trade	Qty	Labour time [min]	Subtask duration [min]
		A-Basic	MECH			On the job
T00002-01	Remove front wheel (refer to B5-A-B3-51-01-00A-520A-D)			1	3	3

Task description (points to columns 1-4)      MTA - personnel (points to columns 5-7)

## Example (2) ⇒ POST MOD task modification details

Changes due to the modifications:

- **New spare parts** to be used within the task
- **Two new consumables** to be considered
- **One new support equipment** to be considered
- **Two new warnings & cautions** to be considered
- **New task steps** to be considered, changes in sequence and **modification** of subtask T0002-03

Subtask Identifier	Subtask description
T0002-01	Remove front wheel (refer to B5-A-B3-51-01-00A-520A-D)
T0002-02	Remove old Front Brake Pads (refer to B5-A-A7-31-02-00A-520A-D)
<b>T0002-03</b>	<b>Clean caliper inside surfaces and rotor with paper cloth and appropriate detergent</b>
<b>T0002-04</b>	<b>Grease gliding surfaces of the brake pad bolt, the brake pads and the caliper housing before installation of the new brake pads</b>
T0002-05	Install new Front Brake Pads (refer to B5-A-A7-31-02-00A-720A-D)
T0002-06	Install front wheel (refer to B5-A-B3-51-01-00A-720A-D)
<b>T0002-07</b>	<b>Clean brake disc and brake pads with paper cloth and appropriate detergent</b>
T0002-08	Test Front Brake System (refer to B5-A-A7-31-00-00A-320A-D)

Spare part / Consumable Identifier	Spare part / Consumable Name	Support Equipment (SE) Identifier	Support Equipment name
PC-1000	Paper cloth	BST-001	Bike stand special tool
<b>BP-0002</b>	<b>Front Brake Pads (including new bolt)</b>	ALLKEY5MM	5mm allen key

# Maintenance planning - Data modules ⇒ POST MOD

Based on the **modified S3000L maintenance planning information** the respective schedule data modules **will be updated**.

Inspection tasks in relation to a limit/event (one data module per limit/event with all tasks)

**Mountain bike - Inspection**  
B5-A-05-40-00-00A-000A-D\_001-00

The **pre-ride inspection tasks** related to „**MOUNTAIN BIKE**“ are included in this data module. Based on S4000P (PMTR1) and S3000L (LSA candidate B5-A-00-00-00-00A) **no update** for task:

- Operational test of Front Brake System by activation of Front Brake Lever

**Front brake system - Inspection**  
B5-A-05-40-00-01A-000A-D\_002-00

The **5-years-inspection tasks** for the system „**FRONT BRAKE**“ are included in this data module. Based on S4000P (PMTR3) and S3000L (LSA candidate B5-A-A7-31-00-00A) also **updated task** in relation to:

- Overhaul Front Brake System

All inspection tasks in relation to a certain system/subsystem

**Front brake system - Maintenance lists**  
B5-A-05-20-A7-31A-000A-D\_002-00

All **maintenance/inspection tasks** relevant for system „**FRONT BRAKE**“ are listed in this data module. Based on S4000P (PMTR2 & PMTR3) and S3000L (LSA candidate B5-A-A7-31-00-00A) also **updated task** in relation to:

- Inspection of Front Brake System hydraulic fluid (not impacted)
- Overhaul Front Brake System

All items with a time limit in relation to a system/subsystem

**Front brake system - Time limits**  
B5-A-05-10-A7-31A-000A-D\_002-00

**Include new items** with a time limit in relation to brake pads.  
Example: **New** brake pad bolt

- limitType = **On condition**
- threshold = **One months**

# Maintenance tasks - Data modules ⇒ POST MOD

Based on corrective maintenance task requirement (TR00009) and updated S3000L maintenance task analysis (LSA candidate B5-A-A7-31-02-00A) the following task is updated: „Replace front brake pads“:

Preliminary requirements	
Maintenance level	ML2 (user garage)
Required conditions:	<ul style="list-style-type: none"> <li>Hold bike secure for easy work</li> <li>Do not actuate the brakes if the front wheel is removed</li> <li>Remove front wheel (refer to B5-A-B3-51-01-00A-520A-D)</li> </ul>
Required persons:	1
Skill level:	A-Basic
Trade:	MECH
Estimated time:	<b>30 min</b>
Required Support Equipment:	<ul style="list-style-type: none"> <li>Bike stand special tool (BST-001)</li> <li>5mm allen key (ALLKEY5MM)</li> <li>Pliers (PLI-001)</li> <li><b>Rubber gloves (RG-000A)</b></li> </ul>
Required supplies:	<ul style="list-style-type: none"> <li>Paper cloth (PC-1000)</li> <li><b>Graphite gliding paste (MOLYKOTEBR2 Plus)</b></li> <li><b>Naphtha aliphatic disc cleaner (EXXSOL D60)</b></li> </ul>
Required spares:	<ul style="list-style-type: none"> <li><b>Front brake pads (BP-0002), including new bolt (ISO4762-M4X40-A2)</b></li> </ul>
Required safety:	<ul style="list-style-type: none"> <li><b>Severe injury may result in case of installation of the brake pad set without graphite gliding paste on indicated surfaces.</b></li> <li><b>Keep brake disc surface free from any gliding paste or oil contamination during maintenance. Clean brake disc after every brake maintenance.</b></li> </ul>

**Front brake pads - Replace procedure**  
**B5-A-A7-31-02-00A-921A-D\_002-00**

Based on updated Maintenance Task Analysis (MTA) in S3000L the steps will be updated in the procedural data module.

**Preliminary requirements: ...**

**Steps:**

- Remove old Front Brake Pads (refer to B5-A-A7-31-02-00A-520A-D)
- Clean caliper inside surfaces and rotor with paper cloth and appropriate detergent**
- Grease gliding surfaces of the brake pad bolt, the brake pads and the caliper housing before installation of the new brake pads**
- Install new Front Brake Pads (refer to B5-A-A7-31-02-00A-720A-D)

**Closeup**

- Install front wheel (refer to B5-A-B3-51-01-00A-720A-D)
- Clean brake disc and brake pads with paper cloth and appropriate detergent**
- Test Front Brake System (refer to B5-A-A7-31-00-00A-320A-D)

# S6000T - Training situation, task selection and task analysis, TNA (1)

**Training Needs Analysis (TNA)**

Excerpt from training situation analysis result

- Formal training on mountain bike **recommended** due to complexity of the product
- **Advanced technology** (hydraulic brake), which was not installed in previous mountain bike models, requires **new skills** for mountain bike maintainers
- ...

Task selection from LSA task list

BE identifier	Task ID	Task name	Difficulty	Importance	Frequency	DIF decision	Analyst decision	Task type	Skill decay
B5-A-00-00-00-00A	T00001	Perform pre-ride bike check	normal	medium	often	no train	no train	Individual task	Low
<b>B5-A-A7-31-02-00A</b>	<b>T00002</b>	<b>Replace front brake pads</b>	moderate	high	low	train	train	Individual task	Medium

No changes

Task analysis : «Replace front brake pads “ ...»

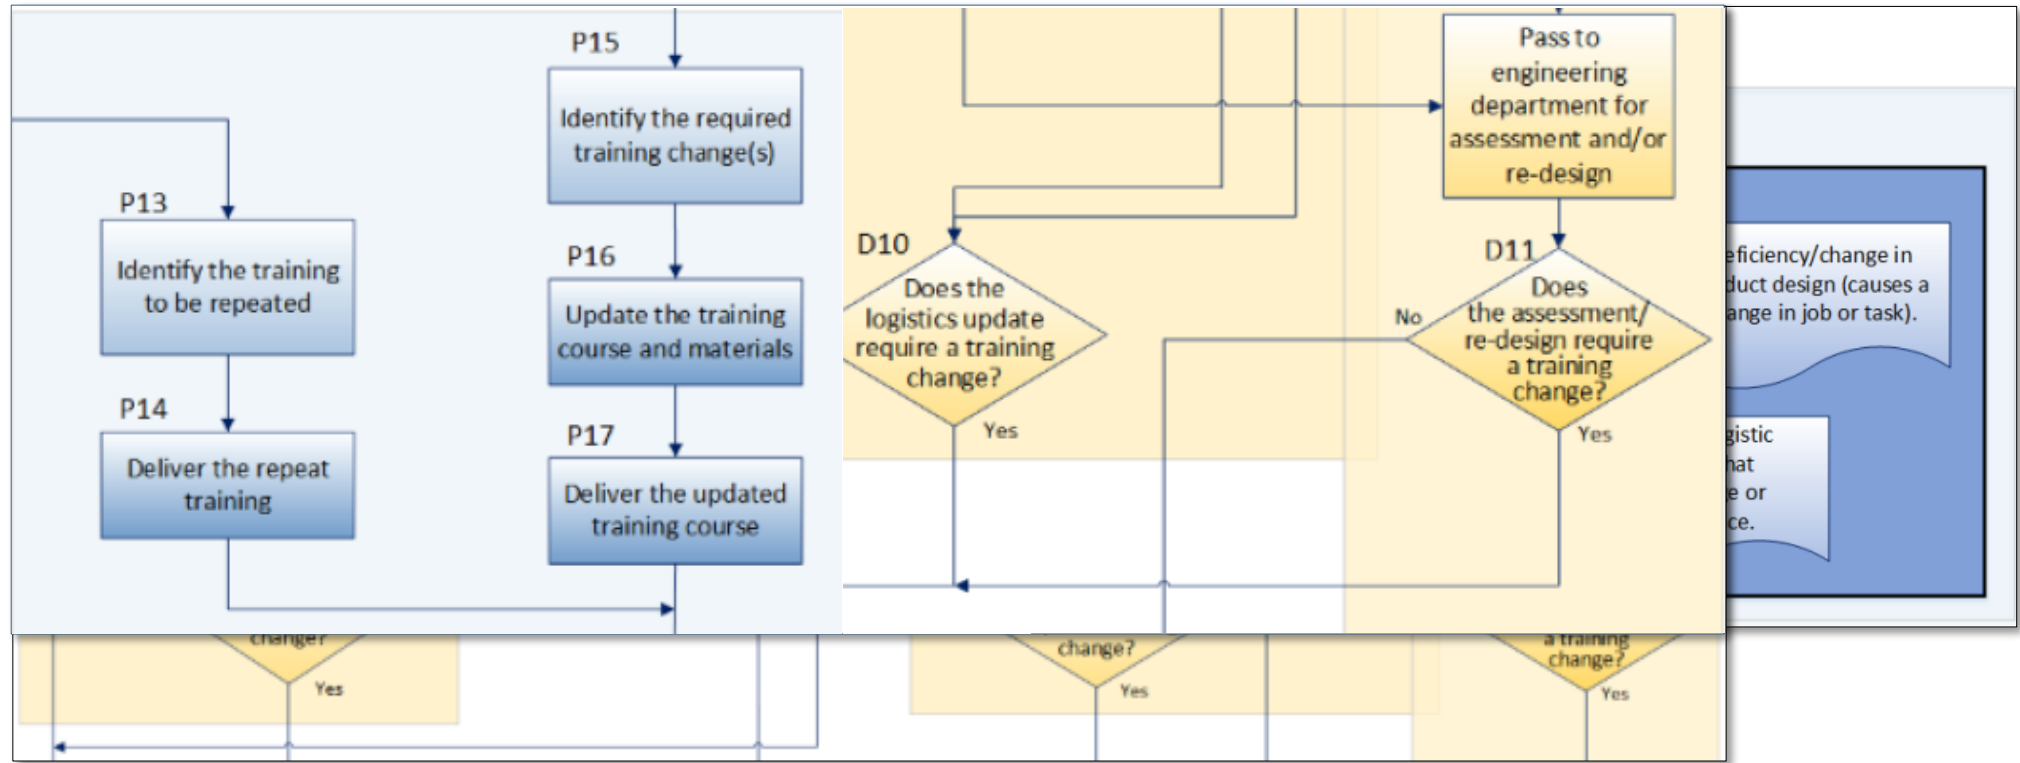

Task ID	Task name	Skill decay	Knowledge/ Skill level	Knowledge/Skill description
<b>T00002</b>	Replace front brake pads	Medium	<b>Knowledge</b>	Locate brake pads
			<b>Comprehension</b>	Explain how the brakes work
			<b>Perceptual</b>	Perform the procedure to replace the brake pads

Subtask analysis : «Replace front brake pads ...» (next slide)

# S6000T - Training situation, task selection and task analysis, after accident!

**Finding the cause of the accident and the process of mitigating it for the future in order to maintain the operation availability of the bike.**

**ISHPO analysis**

# S6000T - Subtask analysis, TNA (2)

## Training Needs Analysis (TNA)

Training Needs Analysis (TNA) can be extended **down to the lowest level of activity performance** ⇨ each subtask/working step within a maintenance or operations support task can be analyzed.

Task ID	Task name
T00002	Replace front brake pads

**New training needs due to design modification**

Subtask description	Knowledge/Skill level	Knowledge/Skill description
Remove front wheel	<i>Refer to TNA for wheels</i>	<i>Refer to TNA for wheels</i>
Remove pads	<b>Knowledge</b>	Locate brake pads
	<b>Comprehension</b>	Explain functions of brake pads
	<b>Perceptual</b>	Use pad pusher
	<b>Perceptual</b>	Use allen wrench
Clean caliper surface	<b>Comprehension</b>	Explain function of brake disc
	<b>Perceptual</b>	Clean the caliper
<b>Install new bolt</b>	<b>Comprehension</b>	<b>How to locate bolt</b>
	<b>Perceptual</b>	<b>Grease bolt, the upper surface of the brake pad set and the caliper surfaces prior to brake pads installation</b>
Install pads	<i>Refer to „remove pads“</i>	<i>Refer to „remove pads“</i>
Install front wheel	<i>Refer to TNA for wheels</i>	<i>Refer to TNA for wheels</i>
Test front brake system	<b>Analyze</b>	Evaluate proper brake operation

# S6000T - Determine Objectives/Media

Determine training "design"

Develop training

PO: Performance Objective  
TLO: Terminal Learning Objective

ELO: Enabling Learning Objective  
ICW: Interactive Course Ware

Objective ID	Objective Type	Objective Title	Primary Media

## Inform the users about the need to update the bike

We must inform the impacted owners/users about the need to change the bike to the POST MOD state, by means of an additional action associated to the safety instruction:

Safety Instructions									
Document Id	Associated to safety Issue	Title	Description	Status	Creation date	Document type	Safety Criticality	Safety priority	Applicability dates
SIN20220803A	SISS20220730A	Yeti SB5 Beti Brake safety instructions	Special safety instructions associated to Yeti SB5 Beti brake MTB-BRS800-801	Approved	14-8-22 13:19	Special safety instructions	Major	High	14/08/2022 - 31/12/2022

This instruction already included the provisional actions to be performed, and now the need to modify the bike:

Required Safety Action							
Safety Instruction Id	Safety action identifier	Type	Description	Priority	Release date	Required implementation date	
SIN20220803A	1	Mandatory	<b>The BRAKE PAD SET must always be installed using graphite gliding paste on clean gliding surfaces (also inside the Brake Caliper Housing)</b>	High	14.08.2022	30.08.2022	
SIN20220803A	2	Mandatory	Pending formal MB manual update, <u>add manually the following statements to the MB manual:</u> - „Severy injury may result in case of installation of the BRAKE PAD SET without graphite gliding paste on indicated surfaces.“ - „Keep BRAKE DISK surface free from any gliding paste or oil contamination during maintenance. Clean BRAKE DISK after brake maintenance.“	High	14.08.2022	30.08.2022	
SIN20220803A	3	Mandatory	Replace ISO4762-M4X40 - STEEL 10.9 bolt (pre-mod) by ISO4762-M4X40-A2 bolt (post-mod) using service bulletin SB1607.	High	29.09.2022	31.12.2022	

# But that is not sufficient...

Yes, the reported safety action tells the users **WHAT** to do.

But they must also know **HOW!**

So we raise a **technical order** and the associated **Service Bulletin**.

## Change embodiment

Change authorization	Change embodiment requirement Id	Change embodiment requirement date	Change embodiment requirement type	Technical order priority	Technical Order required implementation date
Yeti SB5 Beti-CH1602	CH1602	31.12.2022	Mandatory	N/A	N/A

## Service Bulletin

SB Id	Title	Document type	Description	Status	Date	Type	Priority	Embodiment Limit	Cost
SB1607	Yeti SB5 Beti brake bolt replacement	SB	Replace ISO4762-M4X40 - STEEL 10.9 bolt (pre-mod) by ISO4762-M4X40-A2 bolt (post-mod)	Approved	29.09.2022	Mandatory	High	31.12.2022	Free

# Full Bike accident safety report

You may wonder - how does all this information fit together?

This is an **example of a report** about the bike accident using part of the data that you saw today. ➔

It combines **information from the whole process**, ranging from the accident reporting to the actions to be taken.

Because the data model is integrated, it is possible to use in the same report information from multiple specifications.

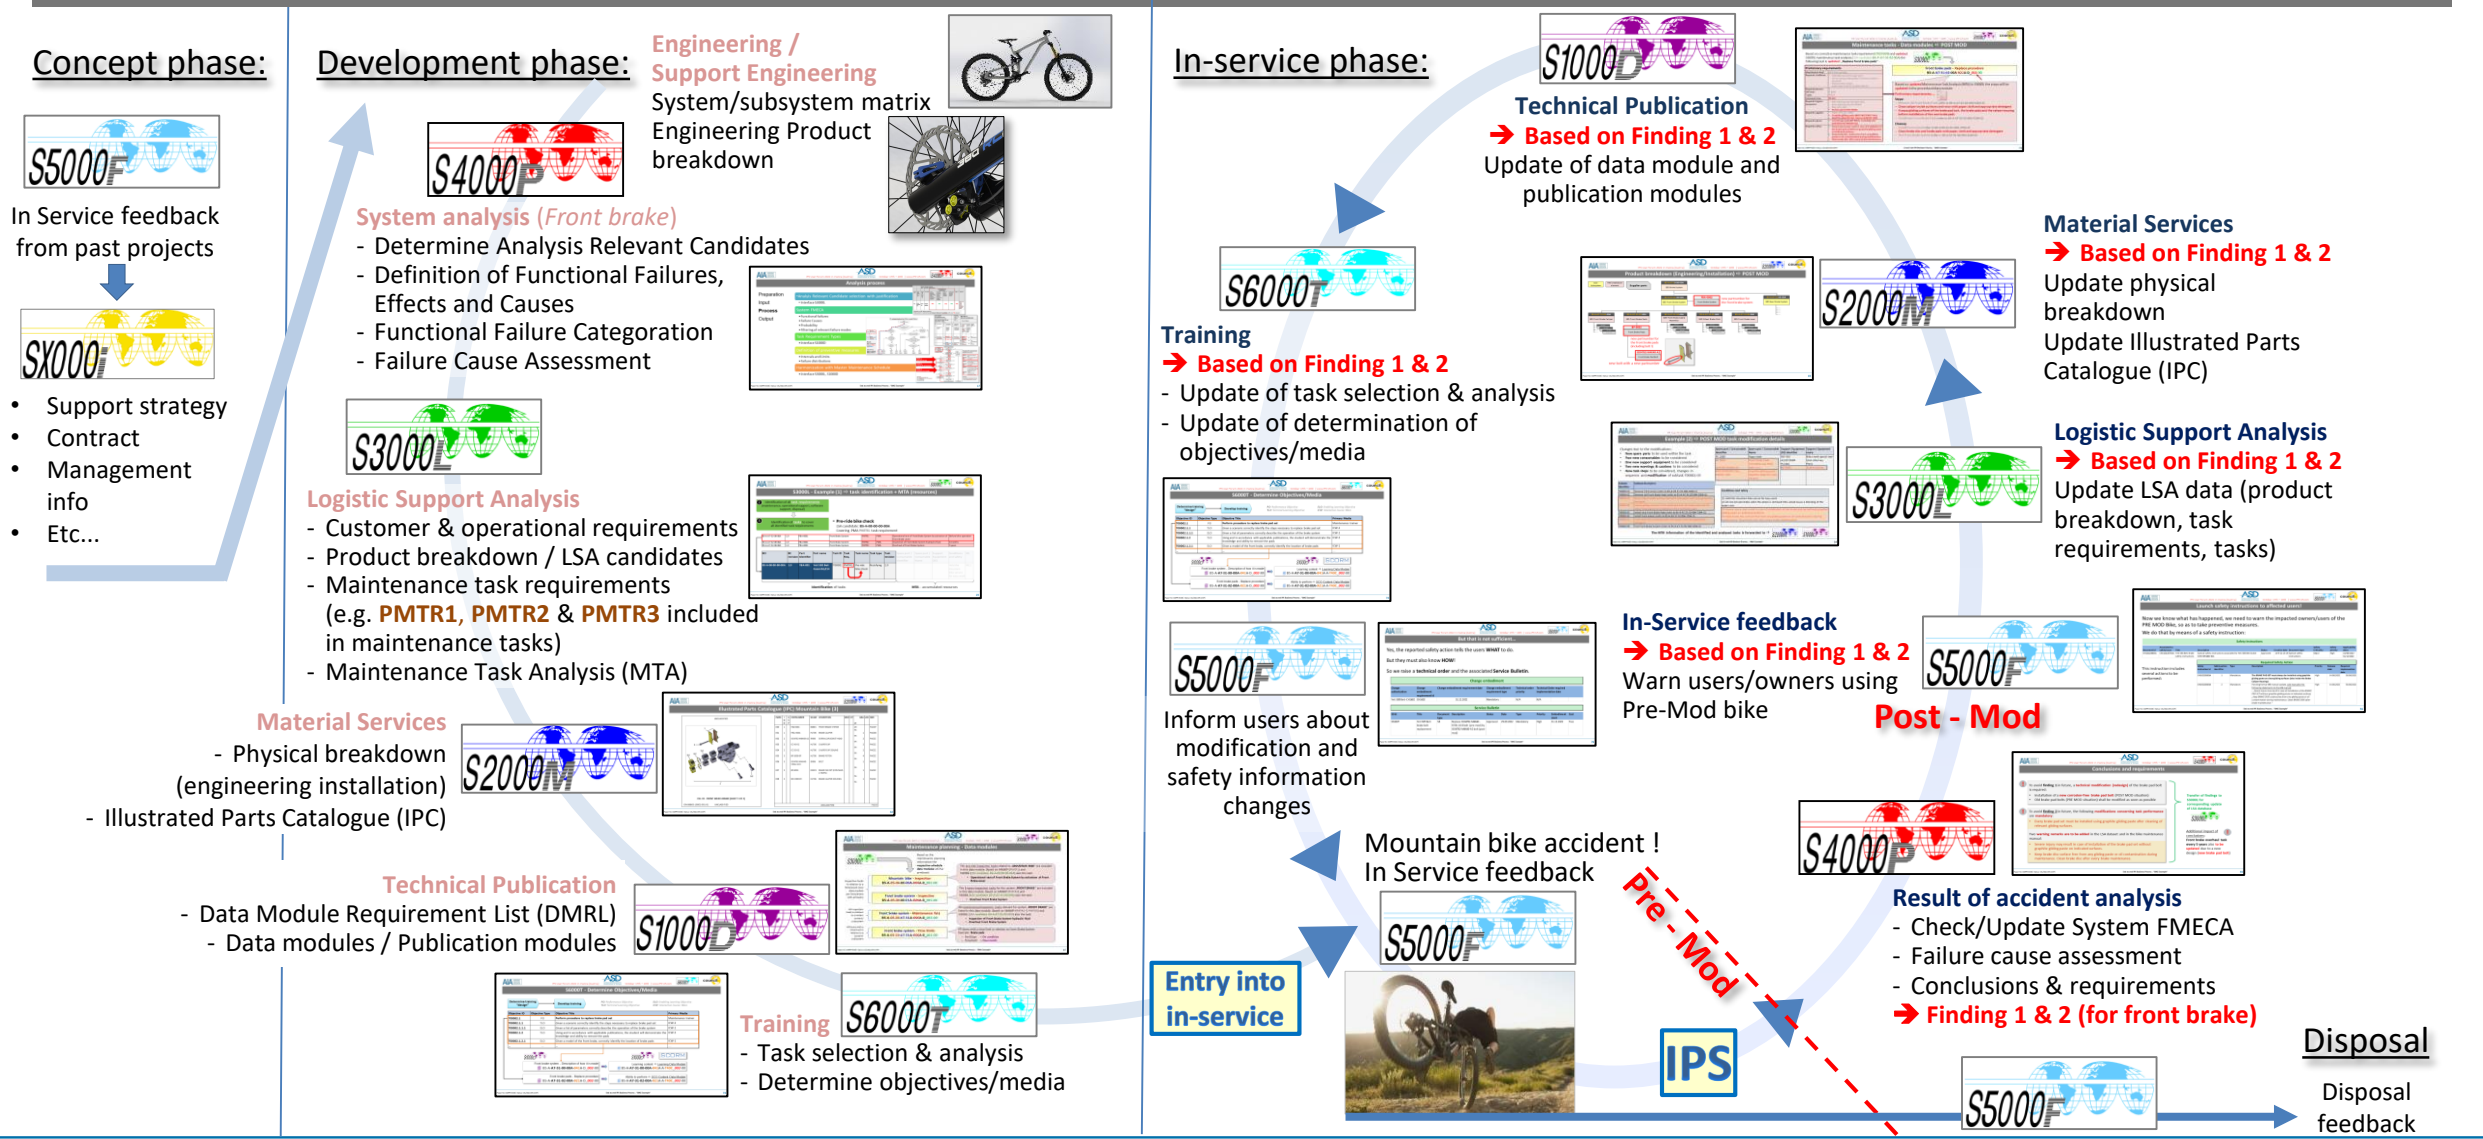

Using the **existing cross-referencing**, you can then further drill down in the S-Series data as required.

**Big data at your fingertips because you standardized!**
